Provide as much detail as possible.			
On Saturday, December 23rd, at 9:30 am, I took my kids, Silvan (24 years old) and Nadia (21 years old), flying in my Cessna 172 P, N53725. We initiated the flight from Kahului Airport, conducting 5 Touch and Goes. However, during the 6th landing on Runway 5, I encountered a power loss on the left base leg at an altitude of 500 to 600 feet, 1 mile downwind. Facing this issue, I promptly pulled the carburetor heat, adjusted the speed to best glide, and switched the fuel selector from both tanks to the right and then to the left tank. Despite multiple attempts to resolve the problem by pulling and pushing the throttle, the engine rpm remained unresponsive, dropping from approximately 2000 rpm to idle. Navigating the challenge, I decided to lower the flaps to 30 degrees at around 50 feet of altitude after crossing the Kanaha Pond Bird Sanctuary. Unfortunately, upon landing, the main landing gear touched down first, and as the front wheel contacted the soft, overgrown sand, the aircraft nosed in, resulting in a slow-motion flip-over. At the time of the engine failure, the aircraft had approximately 15-20 gallons of fuel remaining in the tanks.
