

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 Code of Federal Regulations (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

During takeoff, the left main gear was struck and forcibly removed. Upon landing, the left wing made contact with the runway, resulting in scraping along the outer tip and a portion of the flap, causing damage to both areas. Additionally, the left side of the stabilizer slid across the ground, resulting in minor damage to the underside of the stabilizer.

Following an inspection of the wing and spar using a borescope, it was discovered that the spar had sustained slight damage, necessitating the replacement of both the wing and spar.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

PLEASE SEE THE ATTACHED PAGES WRITTEN FOR THIS REPORT.

NARRATIVE HISTORY OF FLIGHT

On April 12, 2024, at around 7:44 AM, I took off from Falcon Field (KFFZ) en route to destination 93AZ. The flight lasted approximately 52 minutes. As I approached the airport, the winds were measured at about 10 knots, gusting up to 15 knots. One particular concern I had was the presence of a wall adjacent to the runway. To assess the situation, I decided to conduct a flyover for several reasons. Firstly, I wanted to visually inspect the wall's proximity to the runway, and secondly, I observed the Windsock to gauge the safety of the landing. After completing a flyby and confirming the runway conditions and wind direction, I concluded that it was safe to proceed with the landing, which was executed without any issues.

Following the landing, we remained at the private airport for approximately six hours. As I prepared to depart, I noticed a significant increase in wind speed. After reviewing the weather forecast, wind direction, and overall weather conditions, I made the decision to depart the airport. While these conditions fell within my personal limits, I acknowledged the challenging variability of the winds due to the surrounding mountains and terrain near the private airport. Although I took note of the wall located to the south of the airport, I did not anticipate it posing any immediate concerns.

As I accelerated down the runway, I had my ailerons turned fully to the right, aligning with the wind for takeoff. Upon lifting off the ground, the airplane crabbed straight down the runway, as expected. I maintained this crabbing position without further ascent, focusing on increasing airspeed before pulling back on the elevator. While continuing to crab and gain airspeed, a sudden strong gust of wind struck the aircraft, forcefully pushing it to the left. As the aircraft veered left, the nearby wall loomed closer, raising concerns about potential stalling if I pulled up too sharply. With the wall approaching rapidly, I cautiously pulled back on the elevator to clear it, resulting in a collision with the left landing gear.

Subsequently, I pushed forward on the elevator to regain airspeed and continued to accelerate and ascend. It was evident that the left main gear had been lost. After a brief assessment of the aircraft and controls, I opted to circle back over the runway and communicate with ground control. Upon radioing the ground, I requested confirmation of the damage and removal of the left main gear. Once this was verified, I deliberated on my options. Returning to the runway posed challenges due to prevailing winds and the presence of the wall, coupled with the absence of emergency resources nearby. Following a thorough evaluation of the aircraft, controls, and conditions, I made the decision to fly directly to Falcon Field (KFFZ).

Falcon Field boasts a 5,100' X 100' runway equipped with a controlled tower and emergency services, making it the most viable option in this situation. Without hesitation, I promptly contacted Phoenix Approach to declare an emergency, ensuring radio communication and radar tracking services for the duration of the flight. Upon establishing contact, I received my squawk code and radio frequency, with assurance that they would provide continuous support.

Subsequently, I briefed the other passengers on board about the situation and the upcoming procedures. To redistribute weight within the aircraft, I instructed a passenger seated in the rear left side to move to the right side. Additionally, I made a conscious effort to burn excess fuel from the left wing, further balancing the aircraft. I informed the passengers of our landing plan, emphasizing that while we would touch down safely on the runway, the wing will make contact with the ground. I advised them to prepare to unlock and unlatch their doors upon my signal, well, before we land. While also ensuring that seatbelts were securely fastened.

As we neared the landing, I reiterated the exit instructions to ensure a smooth disembarkation from the aircraft. The right-side passenger would be the first to exit, followed by myself, assisting the final passenger in safely leaving the aircraft.

Approximately 20 miles from our destination, I contacted Phoenix Approach to request clearance for a straight-in approach to Runway 22 at Falcon Tower, deemed the most suitable runway for our landing. After a brief wait, Phoenix Approach confirmed approval for a 22 left straight-in approach. Ten miles out, I contacted with Falcon Tower to confirm our situation and runway clearance, receiving the necessary confirmation. I instructed the passengers to prepare to unlatch and unlock their doors, ensuring that seatbelts were securely fastened.

As we approached the runway, my focus shifted to slowing down the aircraft while carefully managing the left wing. I planned to reduce power, deactivate all electrical systems, and shut off the fuel cutoff before the wheels made contact with the ground. This sequence unfolded seamlessly, with the right main wheel touching down first. I maintained control, guiding the aircraft down the runway while preventing the left wing from touching the ground. As the lift on the left wing diminished, it gradually descended and made contact with the ground. I adjusted full right rudder to keep the aircraft aligned straight down the runway and came it to a complete stop.

After the successful landing, the right passenger exited the aircraft first, followed by myself and the remaining passenger. The evacuation process was carried out swiftly and efficiently.

Upon disembarking from the aircraft, emergency services were on-site, and I received a phone call from an NTSB inspector. Shortly after, the aircraft was lifted and relocated to my hangar at Falcon Field.

RECOMMENDATIONS

HOW ACCIDENT COULD HAVE BEEN PREVENTED.

This is a very important question because I take what has happened extremely seriously and what could've been done to prevent it. I've been a Los Angeles City Firefighter for 35 years. Safety of my crew and the citizens of the City of Los Angeles have been my greatest concern. I've been stationed at LAX International Airport for over 15 years as a (ARFF) Airport Rescue Firefighter. I seen just about every type of accident that has to do with airplanes that have flown into LAX.

I take training extremely serious. I'm a member of the WINGS program and obtain training from their frequently. I study aviation and how to be a better pilot on a daily basis and made this a major part of my life. Aviation brings me as much joy as anything I have ever done, and I take the privilege of flying in the national airspace extremely seriously.

This accident most certainly could have been avoided. Even though the winds fell within my minimums, this flight had a very uncommon variable. Most importantly, the obstacle to the left of the runway. Very few airports have obstacles on the right or left side of the runway that would cause this type of incurrence. It was my job to recognize an evaluate that variable and make the safe decision to not fly until the prevailing wins settle down. I've gone over the circumstance and situation over and over in my mind and I am very upset I did not cancel the flight for that reason. I can assure you that I have canceled multiple flights throughout my year and 1/2 time of being a pilot. I have flown across the country into at LAX international airport. Around and through the bravo airspace and have also made several tips into Van Nuys airport (KVNY). I have flown to Wisconsin and experience my first time at Oshkosh.

I meticulously assess the weather conditions before each flight. I have made numerous cancellations due to weather-related factors. The recent incident has prompted deep reflection and evaluation of my decisions, impacting me in an indescribable manner. This instant has had a profound effect on me. Rest assured, valuable lessons have been gleaned, and I am committed to approaching every flight with utmost seriousness, prioritizing the safety of all individuals onboard and on the ground.

Respectfully,

Derrick Ward
