NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

1.) On 05/07/24 I began my preflight inspection of Cessna Skyhawk N65065 around 1435 Alaska time. My inspection resulted in the aircraft appearing to be free of any mechanical issues, having the correct amount of engine oil, and having full fuel in both wing tanks with no contaminants.

2.) I proceeded to complete my "before start" and "starting engine" checklists and the all systems were in working order. I tuned my radio to 124.25 and listened to the ATIS. I noted weather "Sierra". I adjusted my altimeter setting to 29.63 and prepared to put in my request for "student pilot closed traffic" to Merrill Ground on 121.7.

3.) Once approved to taxi to runway 25 via G->N->K I checked the performance of the brakes two times. They engaged properly and evenly. Taxing to runway 25 was uneventful.

4.) Holding short of runway 25 on K, I performed my "before take off" checklist. Doors were locked, controls free/correct, trim was set for takeoff, instruments working, mixture rich, rpm increased to 1700 RPM, magnetos checked resulting in a 100 RPM drop when only running on a single magneto and drop was within 50 RPM of each other, carb heat engaged resulted in 100 RPM drop, visually checked my flaps to ensure 0 deg for standard take off, radios set 126.0 in active and 121.7 in secondary, and gave myself an emergency briefing in case of engine failure outloud. I then proceeded to make contact with Merrill Tower to declare I was ready for take off.

5.) Take off went smoothly, all gauges alive, airspeed 55 knots, rotated back, climbed out at between 75-85 knots, adjusted trim to reduce needed control pressure for desired climb speed. I reached pattern altitude of 900 ft at the start of the downwind leg and trimmed for straight and level flight at 2300 rpm. Once past the numbers of runway 25 I reduced my RPM to 1500 and pitched to reduce my speed to 80 knots, I turned left base and reduced speed to 70 knots, once on final I input 20 deg of flaps and reduced my airspeed to 65 knots. I was high due to the head wind and only using 20 deg of flaps so I performed a slip in the wind to reduce altitude until the VASI should an ideal glide path. I touched down on runway 25, turned off my carb heat, returned flaps to 0 deg, double checked my mixture was full rich, and engaged full throttle for another take off.

6.) I repeated this two more times with the exception of using 30 degree flaps on final and engaging 10 degrees once reducing power abeam the numbers on downwind. This was in order to mitigate having a higher than ideal final approach altitude and reduce the distance of floating down the runway.

7.) On the third landing I was off centerline and my left wheel was last to touch down so I pulled off on taxi way E and contacted ground to taxi back to the the start of runway 25 once frequency change was approved by tower.

8.) I held short of runway 25 for about 15 minutes due to the amount of planes inbound to land. Once approved for take off I performed my take off. I flew the pattern exactly as mentioned above in paragraph 6.

9.) On final approach my flaps were set to 30 deg, my airspeed was 65 knots, and the VASI showed a perfect approach angle. I used my ailerons to combat the slight cross wind and kept my eyes moving between my gauges and the numbers on the runway. Once I was closing in on the runway I transitioned my eyes to the end of the runway and began to flare.

10.) I was then met with the sensation of the aircraft being lifted up from the tail and and my field of view was now the runway surface and the prop began to strike and bend. The aircraft continued to scrape down the runway, but I could also feel it rolling forward. I braced for impact and the aircraft stopped on its back.

11.) While dangling upside down by my lap belt, Merrill Tower notified me that emergency services were on the way. I responded "roger that, I'm OK. 065". I performed a situp before unbuckling my lap belt as to not hit my head. I unlocked the right side door and it opened freely to my relief. I turned off the master switch, and egressed from the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Further analysis of this incident will be under by myself and my instructor as to understand and learn to prevent this situation from arising in the future. I have discussed acquiring video footage with Merrill Tower and they are more than happy than to provide that to me.
