

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Dry Creek State: Alaska

ZIP: 99737 Country: USA

Latitude: 63°28'22.4"N Longitude: 144°51'16.3"W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/14/2024 Local Time: 1510
mm/dd/yyyy

Time Zone: 1510

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N4387Z

Manufacturer: Piper

Model: PA-18-150

Serial Number: 18-8709

Year of Manufacture: 1968

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2000 lbs

Weight at Time of Accident/Incident: 1875 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right main lift strut buckled, distorted ribs in right wing on upper side of leading edge, propeller tips folded back on both sides, propeller spinner crushed, top portion of rudder damaged where strobe mounts, small wrinkle in fabric of vertical stabilizer, windshield broken in multiple places, skylight had small crack.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This flight was a Public Aircraft Operation (PAO). The flight was briefed and conducted as an PA-18 Wheel configuration off-airport operations training flight. Primary objective was to start PA-18 Wheel configuration off-airport training for Trooper Brooks. The initial off-airport training began following departure from a private airstrip near Delta Junction where N4387Z is based. The initial training area was Dry Creek, a nearby large airfield open to public use. Upon arrival at Dry Creek the landing surface was assessed to be smooth and dry and several landings to a full stop were conducted into the wind. Verbal instruction on energy management, approach glide slope and wheel landing techniques were provided throughout. Approximately 6 landings were conducted at Dry Creek and Trooper Brooks was able to repeatedly land within 30 feet of designated touch down spots. Sgt Potter assessed that Trooper Brooks was more skilled and comfortable with three point landings and used very little brake application during landing roll outs. Verbal instruction on braking was provided and demonstrated during a landing. As briefed, Trooper Brooks maintained control of ailerons, flaps, rudder, elevator, and throttle through landing with Sgt Potter demonstrating braking during the landing rollout with full aft stick. Verbal instruction on the effects of over braking were also provided and that the pilot must be ready to release brake pressure if the tail rose from the three point attitude. The training flight was continued up the Johnson River assessing three gravel bars and three airstrips as potential training areas but it was decided to look for something with more margin for error. The accident airstrip was assessed airborne as 600 feet long and had a slight slope with one end higher than the other. The wind was blowing up hill at approximately 5-10 knots. Clouds were scattered with bases near the tops of the surrounding mountains. Light was predominantly bright sun. The surface of the strip was gravel and there were no trees or brush obstructing the approaches. Altitude at the strip was approximately 2500ft. The air temperature was approximately 50 degrees based on the window mounted thermometer. The aircraft was landed to a full stop into the wind with Sgt Potter applying the brakes. The aircraft was shutdown and the strip was walked to confirm airborne assessment. The strip was dry and hard gravel surfaced with some moderate bumps and slightly more than 600 feet of usable surface. No significant obstacles were observed. Wind conditions were confirmed to be directly up the strip with a steady 5-10 kt breeze. The aircraft was started and taxied back to the upper end of the strip with verbal instruction provided on off airport taxiing. Take off was uneventful and Trooper Brooks circled and made a second landing. The first touchdown was 100 ft beyond the desired spot and this touch down was on the desired spot but bounced substantially. Trooper Brooks maintained good rudder control and kept the airplane relatively centered on the runway during rollout despite repeated bouncing. Sgt Potter again assisted with brake application and the aircraft stopped approximately half way down the airstrip. The decision was made to make another landing to get a smoother touchdown with Trooper Brooks applying brakes. Takeoff was uneventful. Trooper Brooks again touched down on the desired spot, this time with a smaller bounce, followed by what appeared to be a normal rollout in a three-point attitude. However, before half-way down the strip there was a substantial increase in deceleration and the tail began to rise rapidly. The stick was pinned full aft but before any verbal correction to the braking could be made the aircraft was past the point of no return. The aircraft nosed into the ground, overturned and came to rest on it's back. After the aircraft came to rest the fuel was shutoff, master switch turned off and the pilots egressed through the door.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Contributing Factor: First attempt at increased braking performance, instructional technique included verbal and demonstration on the accident landing strip

Contributing Factor: Few exposures to landing with less than 700 ft of usable surface, no approach or departure obstacles and based on configuration of the aircraft, no major risk to overrun.

Contributing Factor: Few exposures to landing with sloped terrain, from pictures and video gradient seems to be minimal but was reported as sloping. Estimate from Google Earth shows 14 feet of elevation change over 600 ft which approximates a 2.3% downhill gradient.

Lessons Learned: Game plans, flight techniques and instructional techniques sound. Insidious, but potential for pilot receiving dual instruction to become task saturated with multiple minor exposures to new techniques/environments simultaneously. Completely student dependent but consider separating technique introduction and practice from environment introduction and practice. (i.e. braking technique practice in environment student is used to operating in before progressing to different landing conditions).

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
