Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to the last 3 feet of the Left Wing also light damage to the left elevator tip.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Departed from 97AK High Ridge airport, flew direct to PAUO Willow airport. Entered the right down wind for runway 31. Turned base, turned final, made normal coordinated approach. Touched down at the threshold markers of runway 31, used a wheel landing with low tail. Touched down and rolled out just as normal. I intended to turn left mid field near the fuel pumps which was a significant distance down the runway, so I gave a touch of throttle, kept the tail up and was doing what I would call a fast taxi down the runway. As the turn off came closer I need to slow for the turn. I pulled throttle to idle, the tail set down, I started to lightly use both brakes. The plane was traveling straight and normal. The plane then suddenly veered to the right, I applied full left rudder and brake, the plane did not respond and continued to turn right. Just as the plane was passing between two runway lights the plane ground looped, the left tire came to an abrupt stop due to skidding sideways and the momentum of the aircraft shifted the aircraft onto the left wing tip. The plane then settled and was facing at an approximate 220 heading (90degrees from the runway facing West). The engine continued to run so I pulled mixture stoping the engine, I shut off all electrical power and exited the aircraft.

I walked around the aircraft and found the left wing and left elevator tip was the only damage seen. I decided it was best to clear the active runway. I re entered the aircraft, started the engine and slowly taxied the aircraft off of the runway. During very slow taxi I tested both brakes and they appeared to be braking and releasing properly and provided normal steering input during taxi to the transient parking area.
