Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing damage leading edge, from contact with ground. Left main landing gear broken. damage to vertical and rudder due to resting inverted. prop strike.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We left Koliganek airport and departed to the Northwest to look at off airport landing strips. After landing an off airport location located 8 miles south east of the accident site. I went to a ridge top along the King Salmon river Time was 1945. I flew over several times and established the wind direction was south at 6 mph according to GPS ground speed. I then flew low to inspect the landing area, it appeared to be relatively flat. The first pass into the wind I landed 200 feet long and touched down with 1200 RPM power, rolled 300 feet and added full power. I continued around making a left pattern 500 ft AGL and lined up again. The second attempt to roll the landing area I missed my desired touchdown spot by 100 feet and did not initiate a go around. 400 feet after touchdown the aircraft bounced 15 feet in the air and I was late to initiate a go around. At this point the aircraft was too slow for control surface authority and I lost directional control. The aircraft impacted the ground with full power and broke the left main gear and the left wing contacted the ground resulting in a roll over.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

When operating off airport, pilot will not accept missing the target touchdown spot by more than 30 feet. Also pilot will not try to save a bounce and will always be ready to go around.

Pilot will practice either solo or with an instructor, landing tailwheel type aircraft in a 50' box and initiating the go around technique when it is clear the aircraft will not touch down in the box.

When pioneering new off airport locations, the pilot will conduct such operations solo or with a qualified tailwheel pilot.

Post-accident discussions with other tailwheel pilots and instructors:

Pilot recognized and discussed the dangers of being a 5000hour commercial pilot that is highly proficient in his multi-passenger, tricycle-gear, air taxi airplane because that skill does not transfer to operating a tailwheel with large tires in the off airport environment.

Pilot recognized and discussed lack of proficiency in the tailwheel aircraft contributing to the accident.

He identified invulnerability as a hazardous attitude that contributed to the decision not to go around after missing the desired touchdown location.
