☐ Minor	☐ Destroyed	☐ In-Flight	☐ Fire at Unknown Time	☐ In-Flight	☐ Fire at Unknown Time
	☐ Unknown	☐ On-Ground	☐ Unknown	☐ On-Ground	☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed PAMR for routine flight to Montague Island direct - cruise climb to approximately 6800' - crossed water, slow descent to 2000' to approach beach and ensure glide distance to land. Slow straight descent to beach landing parallel to ocean. Touched down in 3 point attitude. Tailwheel embedded in sand and was unable to maintain directional control due to tail tracking differently than mains and results in ground loop with light abrasion to right wing. Inspected aircraft and determined to be superficial.

Departed beach for touch and gos. On first touch and go, flared significantly early causing stall 10-20' above beach surface. Hard impact on surface was unable to regain control, nosed over and became inverted. Significant damage to wings, struts, stabilizer, landing gear, wind screen.

Beach sand held firm on mains.

I believe I was distracted and unusually nervous from previous ground loop incident, which contributed significantly to my inability to control the aircraft on landing.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

- conduct additional steps to understand landing area conditions such as low flights over the beach, "dragging" main gear
- not operating the aircraft when under an emotionally stressful situation - wait, calm down, think through landing steps
- on sandy areas, such as beaches, perform wheel landing, keep tailwheel off sand until aircraft power has diminished to prevent misalignment between tailwheel and main gear direction and to allow effective braking.
- previous visits to this spot have been in a different aircraft - recognize situational differences even in familiar places and situations to anticipate points of possible challenging flying conditions.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
