Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Propeller strike, vertical stabilizer is bent and as well as the left wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot narrative:

Came over the hill straight from Merktarvik, no real big gusts, smooth flying. Entered the Left downwind for 03, turned base and final, had a big headwind that eased out the closer I got to the runway. I checked my wind speed as I was on short final/touchdown and saw 24-27 knots of wind, right down the runway. I landed just fine, and taxied to the ramp. As I was turning onto the ramp a gust of wind, over 50 knots, came through, picked up the tail, prop struck, and took me off the taxiway. I had the controls fully locked in the forward and left most position. The wind gust calmed, and the plane was tilted forward, on the front wheel, I believe left main, and the prop. I shut off all the electronics and cut the mixture and was getting ready to exit the aircraft when a second gust came and picked the plane completely up and flipped it upside down. The passenger and I were both unharmed, unbuckled from our seats, and were able to exit the plane without any injuries.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Grant Aviation has implemented wind restrictions for most of the Nelson Island area airports predicated on wind direction. In this situation, the wind limit is 25 knots from the north, which is 10 knots less than company standard in all situations.
