Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Both wings, the propeller, lower cowling and spinner all have to be replaced. The vertical stabilizer has to be re-skinned. The engine still needs to be inspected, so not sure of extent of damage to it if any.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Statement from Derek Lowe, Student Pilot:

I arrived at ProFlite around 7:10 a.m. for a solo cross country flight to Manley. From weather briefing it looked like weather was not a factor - winds calm and no precipitation in the forecast. I met with my instructor and we went over the flight plan and reviewed weather again. We went over procedures, soft field landings, radio calls, etc. Once our review was complete I filed a flight plan with FSS. I then went out and did the preflight using the checklist. I checked fuel and filled both tanks full and sumped the tanks and engine compartment drain.

After all checks were complete and I was ready to go, I entered the C172N - N733KV. I followed checklists for start-up, all normal, then radio calls and taxi to runway 2R, all within standards. After run-up and clearance for departure, I took off runway 2R. Everything seemed normal and acceptable.

Flight to Manley was without incident, cruise at 4500' and about 110 kts was normal. Started my descent planning after checklists complete, all was normal. Descended into Manley (PAML), checked wind sock, it showed wind calm. Entered the pattern for runway 36 and began landing checklist: flaps, carb heat, base turn, then final, and all felt and looked normal. Speed was 65 kts. Landing was assured and I touched down on runway 36. Feeling good and then plane started to drift left. I tried to correct with right rudder, but plane was still going left. I tried to correct but it would not go right at all. I felt an odd shimmy when plane began sliding left, my right rudder felt ineffective. Plane continued left until I went off runway. Left wheel went off then it ended up upside down and plane came to a stop. I exited the aircraft and was in disbelief of the event. I got my wits about me and started the process of contacting help.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
