Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left main wing spar (foreward surface) broke from rest of spar at the left main gear attachment point due to a hard landing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Test flight departed runway 17 and made a circuit of the pattern without incident. Approach to land on rwy 17 stable and controlled. Wheel landing attempted but bounced. Conversion to 3-point landing also bounced. Go-around initiated but airspeed too low to prevent a stall and plane landed hard (in upright position, on its gear) on the runway, breaking the left main gear, and skidded off rwy into dirt between runway and taxiway. Initial evaluation was a broken gear leg (which would make this an "incident") but I noticed later (looking at pictures I took) that the wing spar to which the main gear attached was broken (making this an "accident").

Somewhere during this process a runway light was damaged. No other damage or injury.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Maintain adequate airspeed while in flight! I was fooled by the rate at which such a light aircraft bleeds off airspeed compared to a heavier aircraft (with which I am more familiar). A Cessna or Piper can gently bounce down the runway several times before finally settling into a landing without stalling. The accident aircraft behaved more like an ultralight in this regard (in which I have no experience).

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
