Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Prop strike, front landing gear collapse

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Very smooth flight, significant head wind all the way from SBA to RDD (20-30 kn) but very little turbulence if any. Straight approach, perfectly on speed (90 mph as recommended in POH), set full flaps - until the plane dived in at very low altitude a few seconds before flaring. As an afterthought I realize that I experienced 20 knots headwind at 500 AGL but low tail wind at the ground. Very likely the wind shear happened very close to the ground and resulting in the sudden loss of lift. I had no time to react - the dive was too abrupt and too close to the ground. As a result the plane hit the ground with the nose wheel, experienced a prop strike on the first impact and loss of engine. After the first strike I attempted to push the throttle and go around but the engine did not respond. The result was the second impact and collapse of the nose gear.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Combination of the strong head wind at 500 AGL and calm wind at the ground (in fact a couple of knots of the tail wind) is a warning sign for the low level wind shear. In this case it is better to land with 10-20 degrees flaps and at higher speed, especially on the long runway.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
