Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Aircraft sustained damage to propeller, cowling and engine compartment, forward nose landing gear and left wing. Left wing also sustained thermal damage.

No known damage to other property.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After receiving clearance from KSBP ground control, I taxied from ACI Jet FBO to the active runway with full fuel at approximately 09:09 PDT, with the intention of departing under VFR northbound to KVVU.

Once cleared for takeoff on runway 29 at KSBP, I taxied onto the active runway, lined up and continued rolling as I added full power. Approximately 10 seconds into the takeoff roll, the aircraft began deviating left of the runway centerline. I applied opposite rudder but was unable to correct the deviation and the aircraft departed the left side of the active runway. After the aircraft departed the asphalt runway and made contact with the grass median, the nose of the aircraft struck the ground and the aircraft came to a stop approximately halfway down the active runway.

I exited the aircraft and emergency services arrived within moments. After a brief telephone conversation with the NTSB informing them of the incident and receiving authorization to move the aircraft, I assisted airport operations staff in securing and relocating the aircraft to a safe quarantine area.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Earlier identification of the deviation from the centerline during the takeoff roll, and/or additional rudder input earlier in the takeoff roll. Had I identified the deviation early enough in the takeoff roll, I may have been able to safely abort the takeoff before departing the runway surface.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
