Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Bent propeller blades. Damage to right wing struts, front and rear. Possible damage to right wing ribs. Damage to underside of right panel. Broken off communications antenna. No damage to any surrounding property/aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight departed from PALH runway 32 to the north at approximately 1800. No flight following services were requested. Plane proceeded on north route out of the Lake Hood segment and then flew west to the Susitna River. Once at the Susitna River, pilot surveyed a number of sandbars and made an approach and a full stop landing on a large sand bar on the west bank of the river. Pilot and passenger got out of aircraft and stretched their legs before getting back into aircraft. Once back in aircraft, pilot took off from sandbar on west side of river and made an approach to a different sandbar on the east side of the river. Visual inspection of sand bar was conducted prior to landing and wind direction was verified to ensure landing into headwind.

Terrain surrounding landing location is as follows: sandbars to the east of main river channel with multiple smaller "cuts" of the river between sand bars. To the east and west of the river, there are 100-150' trees. Sand bars were made of wet, firm sand.

On short final to sand bar, headwind suddenly and rapidly decreased, resulting in sudden loss of airspeed of the aircraft. Pilot went to full power on the throttle but plane settled toward water. Despite full power, plane wheels contacted water, resulting in a sudden stopping force causing aircraft to flip onto its back. Time of impact was approximately 1915 AKST. Pilot and passenger evacuated aircraft without injury. Due to rising waters and concern for further rising waters with overnight tides, aircraft was righted and pushed onto river bank and secured. NTSB was contacted upon return to Anchorage given unreliable cell service at crash site.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This could have been prevented by doing a low-level inspection into the wind to check for shear. Additionally, carrying a higher speed on final and waiting for any wake turbulence of previous passes to clear could have helped prevent this.
