Date Report Received

This is an aircraft incident statement by Tom Tabbert, PIC of a Kitfox 7SS, N84FS that occurred on June 13th, 2025 at approx. 8:30 am at Krassel USFS airstrip (24K) in north central Idaho.

This mishap occurred following three days of flying where myself and another Kitfox aircraft landed at a variety of backcountry strips including Indian Creek S81, Mahoney Creek 0U3, Lower Loon C53, Bernard U54, Cabin Creek I08, Cold Meadows U81, Big Creek U60, Landmark 0U0, Bruce Meadows, U63, Warm Springs 0U1, and multiple landings at Johnson Creek 3U2 where we were camped. Other backcountry strips I have experience landing at are Thomas Creek 2U8, Soldier Bar 85U, Stanley 2U7, Smiley Creek U87, Garden Valley U88, Moose Creek 1U1, Fish Lake S92, Headquarters, Stocking Meadows, and Elk River ID85 which is my home base.

I approached Krassel in the valley from the north, descending to roughly 5000'ft. msl on the upwind leg to inspect the LZ area, terrain, and runway conditions. The plan was to land to the south on RWY 17 due to limitations of a ridge just to the south. This strip sits on a perch of land in a steep valley, with an amphitheater like rocky ridge to the south, and the north end having a rocky ridge descending from the east that creates a bowl where the strip is located. There was in my estimation room to maneuver for a left downwind/approach and the winds were calm to light out of the north.

I turned left downwind, giving me a comfortable offset margin from the strip, hugging the east side of the valley with trees just to my left and tree tops just below me. Therefore my altitude and offset was limited by obstructions that were positioned directly east of the runway that extended to the north. I estimate my altitude at 500' above the runway. Directly in front of me was the ridge that drops in from the east of the valley that somewhat bottlenecks the landing strip amphitheater. I slowed the aircraft to 65 IAS, lowering the flaps, and trimmed up the aircraft. The sight picture was the same as hundreds of my previous landings. I saw the LZ pass beyond 45 degrees behind me. My attention was then on the rocky ridge in front of me, which is where I safely initiated my base turn.

My base was more of an oval, affording me a little more maneuvering room from the LZ. As I came around 90 degrees in the base turn, the runway came into view from under the wing. Sight picture was good, but I felt I was high on glide slope. I lowered the nose descending to my glide slope picture and leveled off to bleed airspeed before reaching the runway, expecting the aircraft to slow down. I've practiced this maneuver many times before (as well as forward slips) and this was the tool I chose to use in the moment.

The final approach lineup and glide slope was satisfactory coming over the runway, but I was surprised to find I was much faster than I expected. I used up roughly four to five hundred feet of the runway before my initial touchdown. What caught me off guard was that the plane did not settle on the main gear after several relatively smooth attempts. Then, my sudden concern was the amount of strip remaining as I was committed to this landing.

By the time the aircraft settled, the end of the runway was approaching fast, and I still had excess speed remaining. I braked harder and with the bumpy runway, wet grass, and smooth tires, the brakes were not as effective as I expected. I applied more brake pressure and the tail suddenly came up, the prop contacted the ground, and the aircraft nosed over coming to rest inverted.

From where my aircraft stopped, I estimated 75' of distance remained before the runway ended and gives way to a very steep two to three hundred foot ravine. I suffered no injuries.

Operator Recommendation

The pattern around 24K is dictated by terrain and therefore your downwind leg length and altitude is predetermined. The better option if attempting a landing on RWY 17 is to extend the downwind north over the creek, look for the next suitable area well north of the LZ to perform a 180 and fly an extended straight in that allows for precise airspeed and altitude control.
