

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Dillingham State: AK

 ZIP: 99576 Country: USA

 Latitude: 59-03-32.3120N Longitude: 158-34-37.8840W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 07/11/2025 Local Time: 05:30
mm/dd/yyyy HH:MM

 Time Zone: Alaska

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N82109

 Manufacturer: Piper

 Model: PA-18

 Serial Number: 18-7809130

 Year of Manufacture: 1978

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 1750 lbs.

 Weight at Time of Accident/Incident: 1710 lbs.

 Number of Seats: 2 Flight Crew Seats: 1

 Cabin Crew Seats: _____ Passenger Seats: 1

 Number of Engines: 1
Category of Aircraft

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Bend in right wing where it connects to the strut, twist in longeron/top deck near the tail and prop strike while engine was at idle. I have sent pictures of the damage to the NTSB agent assigned to my case.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I flew into Shannons Pond Airstrip (AA15) from Ekuk (KKU) to fill my fuel tank that I keep at the airplane as I was meant to be making multiple trips over the weekend when avgas is not available at the Dillingham Airport. After completing our errands we fueled the plane, I did a preflight and prepared for takeoff. There were two of us in the plane and I was PIC. The runway had just been graded and while the runway itself was not soft, there was a bit of a berm of soft gravel and I had to use what felt like a lot of throttle to power through that and onto the runway from my parking spot. I used both rudder and brake to turn onto the runway as well as to turn around after back taxiing. I added one notch of flaps, rolled with a little bit of throttle to straighten out and line up before starting to add full throttle for takeoff. I was most of the way into the throttle when it felt like the tail started lift up (not like it was lightening up to fly but like it was coming forward) and the plane started to pull hard to the right. Applying left rudder was not getting me anywhere. I asked my passenger if his foot was on something in the back it felt like maybe the right brake was dragging. His feet were tucked back to his seat. The wind can be kind of funny there so thinking I might have had a gust on my tail, I added the rest of the power to try to get rudder authority. Rather than giving me rudder authority, adding power made the symptoms much worse and at this point I was about to hit vehicles parked on the right side of the runway so I chopped the power and made the decision to use the left brake as well as left rudder because left rudder alone was not correcting the pull to the right. This was effective for avoiding the vehicles but because I had to chop the power I had no rudder authority and was not able to straighten out the left turn that resulted from using the left brake. I got on both brakes at this point and nearly got the plane stopped before the ditch on the left side of the runway. Unfortunately I was not quite able to get it stopped in time to avoid the ditch which caused the plane to tip up on its nose/ right wing before coming back down on the tail which was still on the runway. I took pictures from all angles before pulling the plane across the runway to my parking spot because it was in the way partially on the runway. My leading theory is that I got a rock in my right brake while taxiing onto the runway through the small berm of loose gravel and because I turned with brake and rudder onto the runway and then turned around almost immediately as I had been parked at the end of the runway for fuel I didn't notice the stuck brake before starting my takeoff roll but it is really hard to tell what actually happened because there is now a lot of grass, dirt and other debris in the brake from being in the ditch.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Not that I know of.
