Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

rudder, windshield, lift strut, ginger bread braces, propeller, wing ribs

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed PALH at 2PM. I was flying with a friend that was in his own PA-18. We had decided to fly to Knik River area to practice off airport landings. Winds were calm, visibility was good on departure. When we passed the Old Knik River bridge we noticed wind out of the south at approx. 10-15 mph.

We performed three landings in the Knik River area prior to the accident. After the third landing I took off and was looking for another place to land. I found a landing spot just north of George Lake (Knik Glacier) on the river bed. I performed a low flyby of the landing area at approx. 300 AGL to survey the landing area. On the flyby I determined that I could land there. I performed a right down wind approach, there was a slight cross wind (approx 10 mph) at 850 AGL.

As I approached the landing I had two notches of flaps. I picked a touch down spot and began to cut power to touch down. Before touch down I didn't like the terrain so I blipped the throttle to get over some of the rough terrain. I did this twice until I determined that the landing surface was good. I cut power and bounced on landing. I determined that I could still land safely so I continued down the landing area. I landed and was rolling out when I realized that I was quickly running out of landing area. At the end of the landing surface was a 2-3 foot abrupt drop (river washout). Instead of going off the end of the landing area I locked up the brakes. This resulted in flipping the plane on its top.

Still upside down and in my harness I radioed my friend that I had flipped my plane but that I was okay. I exited the plane out of the main door. Prior to exiting I turned off the battery switch. Upon exiting I noticed two ATV's quickly making their way to me. There was also a helicopter that quickly landed to check on me. I didn't have any injuries and assured the people in the ATV's and helicopter that I was okay. I then called Steve Williams (ACME Cub owner) and told him I had flipped my plane and where I was located. Steve informed me that he would call a helicopter recovery team to get my plane out and that he would fly out personally to assist. After the phone call, the people in the ATV helped me flip my plane upright.

Steve Williams arrived approx. 1-1:30 hours later. The helicopter recovery team arrived approx. 1 hour after Steve. When the recovery team arrived it was determined that the best area to bring my plane was the Hunter Creek airstrip near the end of the E. Knik River Road. I left the accident site with Steve Williams and we flew to the Hunter Creek airstrip prior to the helicopter recovery team to best determine where to drop off my plane. The helicopter arrived with my plane approx. 30 mins later. We secured the plane and made a plan to come back the following day to disassemble it and get it back to Anchorage. We then departed Hunter Creek airstrip back for Anchorage.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

After determining my touch down area and not liking what I saw when I was ready to touch down instead of blipping the throttle I should have gone around. Doing this twice (blipping the throttle) I was using up valuable landing surface. Bouncing on the initial touch down also resulted in using up landing surface. I should have gone around.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
