☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Collapsed landing gear legs, prop strike leading to broken propeller, bent left wing struts, damaged cowling and exhaust pipe, one bent fuselage tube

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Tok airport around noon on 8/2 to head to Stuver creek to look for gravel bar landings. Started at the headwaters of the creek and began low, slow flight observing gravel bar surfaces. After working our way down the creek on the 3rd gravel bed at low flight either a root, rock, or berm from washout hooked the tailwheel and caused the 2 main wheels to impact the ground unexpectedly. Tail wheel may have been lower than main wheels from flying behind power curve and caused to touch ground unintentionally with rising elevation. Upon impact of the main wheels the landing gear folded and splayed outright causing the nose to dip down and a prop strike. No injuries to pilot or passenger but substantial damage to aircraft from an impact that seemingly should have caused a bounce at most. Weather and wind was a non factor during entirety of flight.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This accident/incident could have been prevented by doing gravel bar passes at higher elevation AGL or with more power. If area is known to have washouts and large rocks instead of sight seeing at headwaters of creek I could've started my search further down the creek with flatter terrain. I could've accounted for tailwheel being lower than mains by my attitude at that speed. It may have been prevented if I was prepared for needing full power upon impact. This also may have been prevented if I had done more thorough inspections of my internal landing gear components. Lastly, the may have been prevented with different bungees, shocks, or larger tires. Despite contact being unintentional either of those 3 things may have been able to absorb the shock of impact on landing gear.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I am assuming that there was a mechanical failure of the axles on the landing gear or the bungees based on how it folded up upon impact. Can't be sure until further inspection.
