NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

September 8, 2025 around or shortly after noon local time, my hunting partner and I decided to come home from sheep hunting. We loaded all gear and one dall sheep in plane, with a 5-8 mph headwind from down valley, indicated by a garbage bag tied to a sapling. I taxied to SW side of strip which was the uphill portion, where passenger got in the cab. Conducted run-up checks while the engine warmed to 100°F oil temp and 200°F + CHT. Set trim for neutral trim and I notch (100) flaps. Checked with passenger that he was prepared for takeoff and buckled in, and applied full power, initiating the takeoff roll. Halfway down the runway I got a left crosswind that lifted left wing and veered me 20-25° to the right. I immediately applied full left aileron and rudder but the wing did not right itself. Once departing the strip the ruts of the river were 1-2' deep. My right main tire hit one which launched me airborne and the left wheel came down which collapsed my left gear leg under the aircraft, resulting in left wingtip striking the ground. Immediately I pulled mixture and shut down all electronics and exited aircraft. Once departing aircraft I noticed the wind had switched to a direct crosswind from the left and had intensified slightly. 15 minutes later the wind switched to a tailwind and remained that way for the rest of the day, varying between 10-20 mph.
