Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Small dent on leading edge of left wing 1ft in from tip, right wing slightly twisted up outboard of upper lift strut attachment point, fuselage bent 90 deg between tail and baggage compartment.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Statement of event.

On September 16th at 4:30 pm I taxied to the top of the runway, waited for oil temp and pressure to get into the green. I then performed a pre takeoff check. Fuel to right tank, left and right mag ck, carb heat ck, brake ck, trim set for take off, flaps to 1st notch. Then checked to make sure the passengers feet were back from the rear pedals and brakes and their seat and shoulder harness were tight. I started the take off roll. Approximately 100-125 feet into roll as the tailwheel came, off the ground the left wing came in contact with a pine tree measuring 3" at the base and about 1.5" at point of contact with wing 1foot inboard of the tip. This caused the airplane to pull left off the runway and into the tundra performing a ground loop to the left.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

runway maintenance. Tree growth had narrowed safe operating area.
