Left Flap outboard trailing edge was torn and flap was bent on upper and lower outboard skins vic outboard flap track.

Left Wing outboard forward inspection panel was broken, spar cap was damaged, spar web was bent. Skin and web will require splice repair. Cessna engineering contacted for repair data.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was departing Decker airstrip for PAFA. Weather was overcast and misting with intermittent rain. The Decker air strip has on the west edge a road where vehicles drive on up and down the airstrip. The gravel there is gray and clear of vegetation. The rest of the runway has a different hue with mud and tundra (vegetation) growing up through it. The east side blends into the hillside next to it. The road helps give a good visual reference. When I shut down I didn't have a good line for takeoff. At startup I rolled forward and straightened out with the runway. I advanced the power and began to take off. On the departure roll we got into the bumpy part of the runway and my foot slipped off the rudder pedal. We bounced. We started veering to the edge of the runway where a loader was parked. I corrected and aborted to take off. I assessed that we didn't hit anything. No one in the plane thought we hit anything. I taxi back to take off again. I lined up on a better portion of the runway, took off and flew back to Fairbanks. I noticed the damage to the flap after exiting the aircraft.
