Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

prop strike after mixture pulled
nose wheel snapped off
tail damage

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

13:06 started aircraft & performed run-up. no issues
taxied & departed PAAQ 34 to the south
flew known route to Kenai, waypoints Birchwood, Eagle River, Moose Run
golf course, Potter, Barbara Lake, Swan Lake, Kenai PAEN
light - mod turbulence @ 4,500; after Turnagain Arm crossing noticed
precip west of Kenai so dropped to ~~2,500~~ 2,500 MSL

≈ 14:00 entered Kenai airspace, requested pattern work, was cleared for 3 touch&go +
3 full stop. Completed all w/ one go-around. 2 full stop were taxi-backs.
noticed a pull to the right after touching down for final landing. assumed
pilot error, corrected, taxied & departed to the north @ 14:40 approx.

14:50 on course north-cross back to PAAQ. Intended on landing at Soldotna but
changed plan as I was running late, losing light & worried about
weather moving in. slow going w/ ≈ 20kt head/crosswind, mod-sev
turbulence until Birchwood. Landed @ Birchwood full stop taxi back

≈ 15:30 after 1 go-around, skidded slightly right on touchdown but assume it's the ice.

15:40 departed Birchwood for Palmer w/ plenty of fuel & light

≈ 15:55 contacted Palmer Radio for traffic advisory

16:01 entered traffic pattern 34L for PAAQ 450 into downwind

16:05 turned final in landing configuration @ 70-75 kts

Cont. P9

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
 (If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Total Time/ Cycles On Part

_____ Hours

_____ Cycles

Time Since This Part Inspected/Overhauled

_____ Hours

FUEL & SERVICES INFORMATION

Fuel on Board at Last Takeoff
 (Convert from pounds, as necessary)

15-19 Gallons

Fuel Type

☒ 100 Low Lead
☐ Automotive

☐ Jet A☐ Jet A-1☐ Unleaded AV☐ Other, specify _____

Other Services, if any, prior to departure:

EVACUATION OF AIRCRAFT

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit - Describe how the occupants exited and how many occupants evacuated each location:

I exited the right pilot - seat door after aircraft flipped.

OTHER AIRCRAFT - COLLISION (If air or ground collision occurred, complete this section for other aircraft.)

Aircraft Registration Number

Manufacturer: _____

Damage to Other Aircraft:

☐ Destroyed☐ Minor☐ Substantial☐ None

Model: _____

Registered Owner of Other Aircraft

Pilot of Other Aircraft

Name: _____

Name: _____

City: _____

City: _____

State: _____ ZIP: _____

State: _____ ZIP: _____

Country: _____

Country: _____

ADDITIONAL INFORMATION (Additional space for answers to any question.)

Cont.
 16:05 low approach on centerline (1 line a low approach for 34) - felt great & clear-headed entered ground effect & held for ~~2-3~~ 5 sec as I have been working on soft-field landings. touched down perfectly on centerline @ 53 kts (line from spidertracks). maybe 2 seconds after touching down, just as I begin to release nose pressure - I feel the right wheel catch. I try to correct with nose steady & left rudder but momentum is too great. I see the edge of the runway and know I'll veer off so I immediately pull mixture to shut off engine. My eyes were inside the cockpit as my nose wheel goes off the asphalt. I suddenly feel I am going to flip so cover my head with my arms. my harness was on and I did not hit my head as the plane flipped. As soon as she stopped moving I untangled myself and kicked the right-seat door open, and exited safely.

Cont.
16:05 low approach on centerline (1 line a low approach for 34). Felt great & clear-headed entered ground effect & held for ~~2-3~~ 5 secs as I have been working on Sept-field landings. touched down perfectly on centerline @ 53 kts (line from spidertracks). maybe 2 seconds after touching down, just as I begin to release nose pressure. I feel the right wheel catch. I try to correct with nose steady & left rudder but momentum is too great. I see the edge of the runway and know I'll veer off so ~~immediately~~ immediately pull mixture to shut off engine. At my eyes were inside the cockpit as my nose wheel goes off the asphalt. I suddenly feel I am going to flip so cover my head with my arms. my harness was on and I did not hit my head as the plane flipped. As soon as she stopped moving I untangled myself and kicked the right-seat door open, and exited safely.

After the airport manager arrived on scene I removed my backpack, headset, & electronics from the cockpit. I also removed the mags, pulled the throttle, and turned off the master.

A person on scene identified an ice bank where I veered off the runway with an imprint of the nose wheel. I believe this is what caused me to flip. The nose wheel snapped off on impact. The prop was shut off but could have been rotating upon impact - I pulled the mixture before I ~~was~~ was off the runway but it takes a few seconds for the prop to fully stop.
