departure time 19:24

intended destination PALH Gravel strip

On our way into PALH from the north, we had two runway switches. Due to this, we were low and close to the runway in our right downwind for runway 32. I noticed that the base and final turn would have to be sharp. After communicating with my student, we agreed that I should make the landing and we had a positive exchange of controls (I was now flying the plane). In the turn to land, both I and my student became spatially disoriented. When I looked up I recognized the lights, and in my head I saw them as the lights of the gravel strip. I continued the landing because I believed that they were the lights of runway 32. I had confused the ski strip for runway 32 and made my landing. When we touched down, the tires got sucked into the snow and flipped the plane rapidly. After unbuckling, I immediately secured the plane and shut down all fuel and electrical systems before exiting the aircraft.

This experience has highlighted for me how important it is to conduct every task with utmost caution and preparation, no matter how big or small a detail might be.

I will use this experience to learn and recognize similar patterns and mindsets to avoid future incidents.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

In the downwind we could have asked tower for vectors to set up for a better traffic pattern or circled around to land runway 14. After becoming spatially disoriented, I could have asked my student to verify the heading, as the DG was behind the yoke on his side of the plane and out of my sight.
