☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left lift strut bent. Propeller stuck ground, shattered/damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On April 9th, 2026 the weather clear and calm, only a 5 knot wind out of the West, no ceiling. I taxied from the hangars located at the NE apron of Birchwood airport PABV to taxiway C at the end of runway 20R. I performed a runup, received automated weather information from AWOS and waited for landing traffic to land and clear the runway at approximately 3:05pm. I then made a radio call announcing my intentions to depart runway 20R and taxied onto the runway. As I made the left hand turn onto the runway I gave too much power to the engine and the aircraft continued the left turn past runway centerline, yawing very far to the left and headed off to the left side of the runway. I attempted to correct the heading by applying full right rudder, however the aircraft was not travelling fast enough yet for the rudder authority to be affective. The tailwheel was still on the ground. For some reason I did not apply my brakes, I regret not doing so. The main wheels went off the runway and immediately contacted about 12 inches of heavy wet snow. The wheels stuck in the snow and the airplane flipped over its nose and came to rest upside down. Myself and my passenger immediately exited the aircraft as quickly as possible.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Slow down and don't be in a hurry to get off the ground. Apply power gradually and remember to use brakes to help control the aircraft, especially at slow speeds. This could have been prevented by a slower taxi onto the runway, getting lined up with centerline, and then gradually adding power to rotation speed.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
