Narrative History of Flight

Flight preparation began prior to departure for the airport with a check of National Weather Service conditions via NOAA Aviation Website, and confirmation of conditions via telephone AWOS link. Upon arrival I conferred with my instructor – Jason Marcks about the practice plan, conditions, etc. After normal preflight, taxi and run-up I was beginning a short field take off on runway 30 at KATW. The plane accelerated to about 57 – 58 KIAS – I was about to rotate for take-off. The plane veered left, I cut power and attempted to keep the plane on the runway with right rudder, unsuccessfully. After exiting the runway to the south the nose wheel dug in and the plane cart wheeled on its nose coming to rest almost immediately. At that point I secured the aircraft (ignition, master, mixture, and fuel) and exited the airplane.

Sketch

Recommendation

After nearly 3 weeks have passed from this occurrence the only conclusion that I can draw as to the cause of the airplane veering hard to the left is that the left brake was inadvertently applied. To correct the deviation from centerline the amount of right rudder pressure was increased – which apparently increased the left braking action. Keeping left foot off the rudder pedal and / or exercise of greater care to insure no braking during take-off roll would have prevented this incident. The condition of the field (wet muddy soil covered by recently plowed wet snow) exacerbated the results of exiting the runway, but was not a root cause of the exit.
