NARRATIVE HISTORY OF FLIGHT (Please type or print into)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. HAD CAUGHT BAD COLD OVER THE WEEKEND, SHOULD HAVE STAYED IN BED.
2. SET PERSONAL MINIMUMS HIGHER - TEMP./WIND/TURBULENCE
3. MORE REST, HAVE BEEN MOVING INTO NEW HOUSE, WORKING LONG HOURS AND GOING HOME TO WORK ON HOUSE & MOVING BOXES TILL LATE -
4. MORE EXPERIENCE, NO OPPORTUNITY TO OBTAIN "DUAL" EXPERIENCE IN A WORK ENVIRONMENT.
5. THE NEWEST PILOTS ALWAYS FLY THE OLDEST AIRPLANES.

NARRATIVE HISTORY OF FLIGHT - N365SM

Date of Accident 80/06/2012

The Agicultural Application flight departed the Lakin KS airport (36K) at approximately 10:20 AM Central time / 3:20 Zulu, on the 6th of August. Weather was obtained by ULS AWOS and a company installed weather station. Conditions at the time of the accident were clear visibility, wind 200 Deg. at 18 kts. gusting to 22. Temperature was in excess of 88 Deg F and an unknown dewpoint. Altimeter setting is unknown and density altitude was estimated to be in excess of 6,000 ft. Turbulence had been encountered at ground level for the past hour and we had planned to discontinue any more application at the end of this load. The weight of the aircraft was calculated to be 9,000 Lbs. The crop we were treating was corn, the chemical we were using was insecticide.

The legal description of field where the accident occurred is - NorthEast corner of Section 12 - Township 24 - Range 37, GPS coordinates where the airplane came to a stop: N 37 Deg. 59.0438 Min. W 101 Deg. 19.6055 Min.

After arriving back at the field (this was the second load) I resumed a Left Hand Reverse Racetrack Pattern just west of the North/South centerline of the field. I had sprayed one full pattern and had just completed a downwind turn proceeding Southbound (into the wind). There is a high power line (Transmission Line) on the North side of the East/West road, and a normal power line on the South side of the same road. The turn was normal, I was experiencing turbulence, and I was located within a couple feet of my swath per the GPS guidance. I then descended into the field beyond the power lines and leveled out approximately 3 to 5 feet above the corn, I then experienced some "sink" and applied back stick to maintain level and the airplane descended enough for the wheels to touch the tops of the corn. As the wheels touched the airplane began to pitch nose down as well as slow down, this led to further penetration into the corn which resulted in rapid deceleration coming to a complete stop. The propeller was stopped and the engine was running, I reduced the power to idle, shut down the fuel, turned off the fuel, and shut off all switches. I then exited the airplane on the left wing and called the Lakin facility to notify them. There were no physical injuries and I exited the field on the East side of the last swath in the untreated corn.
