NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

Proceeding VFR from KOSF to KBEH, following the Lake Michigan shoreline as per the VFR Flyway under the Chicago class B airspace. About 15 miles out contacted Gary tower requesting class D transition, which was approved. About 10 miles from Gary, slowly climbing through 2300 feet (approximate) heard and felt 2 brief thumps from the engine area, occurring within 5 seconds of each other. Within 10 seconds thereafter, another thump and engine rpm raced. I pulled throttle. The engine continued to run normally and the prop was spinning but not responsive to throttle changes. I recognized a gearbox failure. I notified Gary of engine trouble and that I was going to land. I set up best glide. Tower asked if I could make Gary. That possibility was considered but quickly discarded due to lack of glide distance. I looked for a place along the shoreline. A park was nearby but there were too many people there. Adjacent to the park was a field. I headed for it. The airplane landed normally, but the nosewheel grabbed in very soft soil and flipped the airplane on to its back. I extracted myself from the inverted plane, then reached in to cut off all electrical components and to shut off fuel. Waved to a banner towing pilot who was advising Gary.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

My recommendation is that owners with this particular engine/gearbox combination make gearbox removal a regular component of inspections, thereby enabling visual examination of the spline shaft
