RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unknown

Below is a summary of events that occurred on December 24th at approximately 10:24am.

After checking the weather at San Antonio International, they were reporting VFR with calm winds. I performed a preflight check and taxied over to the fuel tanks and filled up with 12.10 gallons. Upon completion I performed all preflight and before takeoff check lists. I then contacted clearance delivery, then the tower and was cleared for take off on runway 30.

After a normal take-off run with a speed of about 75 to 80 knots I rotated and was experiencing a normal climb until reaching approximately 50 to 75 feet above the ground, the aircraft suddenly pitched left and was unresponsive to control inputs. Just before impact, I tried to flare and reduced the throttle. Once the airplane came to a rest, we slide open the canopy and before stepping out shut off all fuel and electric. Fire and EMS were there 5 to 10 minutes later.
