NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

On February 16, 2013 after receiving fuel top off of 100LL (76 gallons total on board), I departed the ramp at EDC – Austin, TX for a VFR flight to T82 – Fredericksburg, TX at approximately 9:45 P.M. The weather at both departing and arrival airport terminals and enroute was clear below 12,000 and light winds. I did my regular pre-flight checks, turned on my Navigation and right wing landing light and started to taxi for a runway 13 departure. Toward the north end of the taxiway, my landing light on the right wing went out. I reached over and cycled my light switch on and off to see if it would come back on as I started braking. It did not come back on. I assume the bulb burned out. Immediately, I was going off the North end of the taxiway and down a very steep embankment. I had the yoke pulled all the way back, as I do for taxiing, and continued braking, but the steep incline was too much to stop the aircraft from rolling down that hill. The main landing gear bent backwards and the prop struck the ground. It was extremely dark up there with the light out and there are no reflectors on the north end of the taxiway. There is no flat area once that paved taxi surface ends.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Reflectors on North end of taxiway. More gradual grading of surface so if a plane goes over the edge it can stop in time before rolling down that hill.
