NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

Pilot arrived at TEX airport approx 10:45am, and completed preflight inspection. Intended destination was KGUC. No services required. Listened to AWOS reporting winds 140@24kts. Taxied to runway 27 and started departure at 10:58am. Rotated aircraft just left of centerline approx 3000 ft down runway. Aircraft started to climb then yawed (weather veered) hard to left and stall warning horn activated. Pilot could hear and feel strong gust (airport camera and recording show 38kts sustained gust from behind aircraft) and attempted to clear airport rising terrain to the South. Aircraft cleared the nearest terrain but was near stall speed, and pilot observed aircraft descending in a strong downdraft or possible rotor. Downdraft or rotor likely created by strong gusts of wind spilling over the 1000 ft cliff face. Pilot had elected to not retract landing gear, and maintained a near wings level (left wing was slightly lower) position as aircraft made a hard landing on the flat terrain before the cliff. The flight likely lasted less than 30 seconds (seemed longer). Aircraft came to rest within approx 200 ft with gear collapsed after skidding into small brush/trees and airport perimeter game fence. The terrain to the South of runway 27 has a sloped hill approx 50' high. After the hill crest, the terrain levels for approx 200 yards then drops 1000' off the cliff side.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Pilot could have delayed departure until winds subsided. Having flown into KTEX more than 100 times, it is not unusual for it to be windy. The strong 38kt gust from the East was not expected, but another choice would have been departing runway 9. This leads into another set of issues, as a runway 9 departure sets you up into rising terrain (and the town of Telluride) on 3 quadrants up to 14,000 ft.

ADDITIONAL INFORMATION *(Please type or print in ink)*
