NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

We departed from Fort Worth Meachum (KFTW) at 15:37 on an instrument flight plan to Big Spring, Texas (KBPG). Just past Abilene, Texas (KABI) I canceled IFR and picked up VFR flight following and diverted for the U Ranch. (VFR conditions were now present) I requested to remain at 8000 feet since we were only about 10 minutes from starting our decent. Fort Worth Center approved my request for 8000 ft. 10 minutes (+ -) later I started my decent Decent and flare were normal. I noted the windsock and saw that the wind was within my capabilities and the limitations of my aircraft. After I touched down, a gust of wind caught my airplane and lifted me off the runway and carried me off to the right. At this point i felt that a go-around was not necessary or as safe as landing the airplane. At My current air speed rudder and alieron control had become limited and when i touched down my right main touched down on the edge of the runway and continued to move to the right which in turn continued into the grain field adjacent to the runway. The grain field had been recently plowed and with no moisture present was very "loose". This in turn pulled me into the grain field where we traveled for approximately 100 feet until the nose wheel "dug in" and subsequently the airplane "nosed over" and came to rest on its' back.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Put in a cross wind runway. not plowing all the way to the edge of the runway.
