NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 9/7/2014 The student and instructor planned to do the first solo flight with 3 landings to a full stop at Belen airport (e80). At 1130 local, the student and instructor departed KABQ for E80 and arrived around 1200 local. The student did three laps in the pattern to landing before the instructor got out of the aircraft to let the student solo. The first landing the student accomplished was to a full stop and appeared to be very firm. On taxi back, the instructor radioed to the student on a handheld that the landing appeared firm and asked how the airplane feels without an instructor in it. The student then taxied back to runway 21 for his second takeoff. After a lap in the pattern, the student landed the airplane but bounced twice very hard. The instructor then radioed to the student to initiate a go around before any more bounces occurred. At that point the aircraft powered up and pitched up and appeared to be a stalling pitch attitude from the ground so the instructor radioed in again telling the student to "pitch down, pitch down" in hopes he would recover from any impending stall. At that point the aircraft veered left of the runway while pitching up and down. It flew over a set of blue hangers then out of view from the instructor to where it eventually crashed. The instructor ran to the scene of the accident where he saw the wreckage and the student walk out of the hole in the hangar that the airplane flew through.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It appeared that the student didn't have enough right rudder to counteract left turning tendencies which caused the plane to veer off course. Also, because of the close proximity to the hangars in the area, the student didn't have enough altitude to recover properly from any impending stall in fear of crashing into a hangar so he may have pitched up too abruptly causing the developed stall that led to the final impact.
