NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 9/7/2014, my flight instructor and I planned to do my first solo flight with three landings to a full stop at Belen airport (E80). We departed KABQ for E80 around 11:30 local time and arrived in Belen around noon. We did two successful landings from the pattern onto runway 21 each time coming to a full stop before the instructor got out of the aircraft to let me solo. We parked the aircraft, and I got out to get water before starting restarting the aircraft.

Once back in the aircraft, I checked radio communication with the walkie-talkie the instructor had brought along to maintain communications, and then I taxied to take my first solo takeoff. I successfully took off and landed the aircraft, albeit a little firm, for a full stop on the first landing. When I was taxiing back, the instructor radioed to me that the landing appeared firm and asked how the airplane felt without him in it. I noted it felt lighter and quieter. I then taxied back to runway 21 for a second takeoff. After completing a lap in the pattern, I landed the airplane with full flaps extended but bounced twice due to flaring a little prematurely. The instructor then radioed to me to initiate a go around.

I pushed the throttle to full power, applied right rudder and lowered one flap. As I was at a very slow speed, I had a hard time counteracting the left turning tendencies and the plane started veering off the runway to the left. I was very close to the ground and cognizant of not wanting to hit the runway lights with the propeller or landing gear, and I pulled back on the yoke. This initiated a stall, so I pitched down slightly. At that point the aircraft regained lift and I continued working on adjusting to get the right pitch and level to pick up speed and begin to climb. As I was starting to climb the instructor radioed to "pitch down." I asked him to "say again" and he repeated "pitch down." When I pitched down, all I saw was the blue of a hangar in my windshield. I immediately yanked the choke back and turned to the right to avoid colliding with the building. This put me into a full stall. I pitched down to correct; however, due to my low altitude at the time and proximity to another hangar, I did not have enough time or room to regain from the stall, and I crashed into the side of another hangar. Immediately, upon crashing I was cognizant of the smell of fuel. I could not get the door open, so I unbuckled and climbed out through the broken window and exited the hangar through the hole in wall. Moments later the instructor arrived running relieved and shocked to see me standing there.

RECOMMENDATION (How could this accident/incident have been prevented?)													
Operator/Owner Safety Recommendation The first issue was flaring prematurely and struggling to control the left turning tendencies at a very low speed with too much pitch when I applied full power for the go around. However, the bigger issue was attempting to put following radio instructions ahead of flying the plane. I had been instructed on several occasions to fly the plane first and then listen/follow radio instructions. This accident might not have occurred had I done so.

QUESTIONS:

1. Have you made any safety presentations to other pilots, or do you plan to?

I have not made any presentations, but I would be willing to do so.

2. What happened to all of the fuel in both tanks... was the floor of the hangar wet with fuel when you exited the wreckage?

The fuel stayed in the wings. The floor of the hangar was not wet with fuel

3. You said you smelled fuel when you were exiting. Were you at that instant afraid of fire or explosion?

I wasn't afraid of a fire or explosion, I just thought it was a possibility.

4. What were your injuries (other than crawling through the broken Plexiglas)?

A couple of minor bumps and bruises on my head and sides from being jostled around in the collision.

5. Have you resolved to never again fly in the cockpit of any airplane that does NOT have shoulder harness restraints?

I am not flying in another cockpit without shoulder restraints.

...

6. What would have happened if you had impacted just 5-feet to the left or 5-feet to the right?

We might not be communicating as I may have hit one of the structural I-beams, and or collided with the vehicle that was parked in the hangar.
