Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to airplane upon hitting ground. There were flames almost immediately at firewall by passenger's feet. By the time we got out the flames were too intense to try to retrieve anything from airplane or attempt to get to fire extinguisher.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Every year around the middle of sept. we take a fishing trip to Mn. The weather didn't cooperate on the 14th or 15th for a VFR flight from Denison, Ia to Longville, Mn. I had listened to XVG & DNS AWOS several times. In addition I had called Flight Service 2-3 times each day to get a VFR briefing. In my experience the information from Flight Service has always been very accurate. I was also using Foreflight on my Ipad to get radar and the reporting weather at both locations.

On the 16th the overcast skies gave way to clear skies for the entire route. After waiting for 2 days we were packed and ready to go. Around 10:30 am, on Sept. 6th, Sandy dropped me off at the airport to load the plane and do the pre-flight inspection. Demo had started that morning on several of the taxi ways preparing for new concrete. We didn't want to leave our vehicle at the air[port with all the construction, so Sandy took the vehicle back home and got a ride back with a neighbor.

Since we have a place at Longville we don't take a lot of clothing back and forth. I remember making note that the baggage and sacks I loaded were bulky but not heavy. I estimated the weight in the baggage compartment at 40-45 lbs. The collapsible dog kennel was secured with the harness system in the back seat.

With the pre-flight done I was ready to go when Sandy returned. I used the MFD checklists to prepare to taxi. We did a back taxi on runway 30 and performed the before takeoff and takeoff checklist items at the turn around staging point. After a final check for traffic on the MFD and out the windshield we announced our departure on the CTAF. With 50% flaps, mixture full rich, and boost on I executed the takeoff procedures and rotated at 70k, and flaps up at 80k. Once I had cleared the pattern I reduced power to 90% and climbed out at 100k. (70, 80, 90, 100)

While climbing to 7500 feet I set the GPS to KXVG and engaged the auto-pilot. Once I reached 7500' I engaged the altitude hold. Next I tuned the MFD to the engine page and went through the procedure to lean the mixture. Tuning to the "nearest" page I identified the 2nd main CTAF and monitored it as well.

I got the sectional maps out and followed my progress on the map with the moving map on MFD. During the flight I turned to the nearest page several times to monitor distance to airports along the way as well as determining local CTAF to monitor.

It was interesting to see all the traffic in the sky, especially all the planes showing up at 4-5000' above us and descending. With the range set at 30 miles we were still saw 5-6 planes at one time.

I monitored and reset the barometric pressure a couple of times during this leg. I also remember watching the wind direction change from a 10-12 k headwind to calm.

As I approached Camp Ripley I switched the autopilot to Heading mode with a heading of approximately 354. This heading kept me comfortably away from the restricted airspace. I descended to 6500' during this westward segment.

When I was able to turn back towards XVG and still stay away from Ripley, I set the auto-pilot to XVG and descended to 5500'.

When I got close to Pine River I listen to their AWOS and started my descent. This is also where I reviewed the landing checklist. I adjusted my mixture to full rich, turned on the boost, and checked the brakes on both rudders.

I next listened to XVG weather and announced My position 15 miles out. There was another plane taking off from XVG and we talked. He was leaving with a heading SE of airport and I watched him on the MFD.

I announced again at 8 miles out. When I got to Woman Lake, I circled my friend fishing at the opening into Woman Lake.

As I approached the airport from this spot, I entered the pattern south of the runway and turned into upwind 31 and announced. I continued to crosswind and then turned to downwind 31, where I announced.

On the downwind leg I reduced power to 50% and then even lower to achieve 100k by the end of the runway. Elevation was 2100'. I engaged 50% flaps. and reduced power to 25%.

After turning base I engaged full flaps at 80k. The crosswind pushed me a little long as I turned into final but I easily recovered and was lined up with the runway @ 80k, and I adjusted trim for landing.

The plane did not settle in when the mains touched and the plane slightly bounced.

I put full power to initiate a go around while keeping the right rudder in as I had used for landing.

Instead of the aggressive takeoff I was accustomed to, the plane veered back and forth and DID NOT respond to my aileron control.

We were out of control. My last thought before crashing was to change flaps since we were going faster than 80k.

Immediately there was smoke coming from the dash and flames were just in front of Sandy's feet.

My door would not open. Sandy opened her door as I shut down everything. All the switches from left to right. Power and mixture off, and finally fuel selector to the center (off) position.

I turned around and got BeBe, our dog, out of her kennel and sort of tossed her out the passenger door to Sandy who was on the ground by the wing. As I climbed out I grabbed my flight bag from the back seat.

When we got 20-25' away we realized that the flames were too intense for us to retrieve anything else. We got farther away from the plane in case of explosion.

I called 911
