NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

At about 1145 hours , 10 MAY 2014 , as pilot in command , I departed from runway 20 at 2C6 [Tri-County Airport , Yates City , IL.] and began a normal climb-out and remained within the airport area.

I circled the airport and climbed to about 2200 ft. MSL , and continued to circle the airport for about 20 minutes.

At about 1205 hours, I began a descent... getting into the airport landing pattern ... planning to do a " touch-and-go" which I did.

I departed the runway ...doing a normal climb out ...to about 800 ft. AGL , and planned to re-enter the pattern for a full-stop landing.

At about mid-field in the extended ' down-wind leg ' the upper wind had drifted my plane a little further to the East ...than what would be a ' normal ' down-wind position ...I felt a complete loss of thrust ... and the engine " over-reved" ... telling me that the engine was not transmitting any power to the prop.

I reduced the throttle to ' idle 'and because of my increased distance away from the airport , I decided that I could not return to the airport... to make a normal landing.

While searching for a suitable ... ' off-airport ' landing spotI advanced the throttle ...but the engine ' over-reved ' ...so I reduced the throttle to ' idle ' , again ... confirming that there was no power going to the prop.

The airport is mostly surrounded by farm fields ... but the terrain is rolling and hilly and uneven.

I selected a field that appeared to be unplowed and unplanted ... but is was , also , hilly and rolling.

I maintained about 70 to 75 mph [indicated] during the descent ... and apparently mis-judged my final distance above the groundat the initial ground-contact point ... as the plane obviously made contact with the ground at an excessive rate.

The plane did not roll over and I was able to exit the cockpit thru the broken canopy..... I said a few CHOICE words then began gathering some of the aircraft parts and pieces laying on the ground.

As ' trauma ' folks arrived , I was told that it was 1215 hours.

I believe that the cause of the power loss ... to the propeller ... was because the large cog belt pulley / prop hub assembly had slipped DOWN in it's support bracket ... allowing the 3 cog belts to go ... SLACK ... and not transfer any engine power to the prop.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I will not know the answer to this question until I can fully evaluate the condition of the cog belt / pulley reduction system.
