

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Pueblo State: CO

ZIP: 81001 Country: US

Latitude: 38/17' 21"N Longitude: 104/29'48"W

(Enter in decimal degrees or degrees minutes seconds)

Accident/Incident Date/Time

Date: 07/27/2014 Local Time: 9:17 am
mm/dd/yyyy

Time Zone: MDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N72CW

Manufacturer: Beechcraft

Model: C33A

Serial Number: CE-69

Year of Manufacture: 1966

Amateur-Built: ☐ Yes ☒ No If Yes ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 3400 lbs

Weight at Time of Accident/Incident: 2934 lbs

Number of Seats: 4 Flight Crew Seats: 0

Cabin Crew Seats: 2 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft destroyed, no other property damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was a cross country direct VFR flight from KSNL to KPUB (403 NM). I used several computer based weather sources and had on-board weather. The assistant airport manager at KSNL, Mr. Keenan English (405-878-1625) personally drove the fuel truck to my hangar and topped the mains the day before the flight. I sumped the tanks and verified both tanks were full (80 gallons, 74 usable) during preflight the morning of the flight.

I departed KSNL on runway 17 at approximately 7:25 am CDT. I called OKC approach (OKC approach confirmed my call occurred at 7:30 AM CDT) and said, "N72CW just off Shawnee en-route to KPUB, climbing to 6,500, request flight following". KPUB reported the accident occurred at 9:17 am MDT, thus the flight was 2 hours and 52 minutes in duration. Using the JPI engine monitor, I adjusted the fuel burn to 16 gallons per hour to keep the CHT below 380 degrees. I recall switching the fuel selector to the left tank after approximately 1 hour of flight. At an hourly fuel burn of 16 gallons, the total fuel burn for an approximately 3 hour flight should have been 48 gallons, leaving 32 gallons remaining at the time of the accident.

The NTSB examiner, Arnold Scott said the airplane was moved from Pueblo to Greeley Colorado, where the tanks were drained. Mr. Scott stated that the fuel selector was on the left tank and no fuel was recovered from the left tank. Is it possible some fuel from the left tank escaped following impact or during the wing removal and transport to Greeley? Mr. Scott also said 20 gallons were drained from the right tank. Thus the flight consumed 60 gallons in 3 hrs, an hourly fuel burn of 20 gallons rather than the 16 gallons indicated by the JPI engine monitor throughout the flight.

I cannot explain the 12 gallon difference (32 gallons compared to 20 gallons) between the amount of fuel measured during the NTSB inspection and the quantity of fuel which should have been left assuming the normal fuel burn for a duration of 2 hours and 52 minutes. If the right tank contained 20 gallons, the left tank should have contained 12 gallons at the time of the accident.

Approaching KPUB, I obtained ATIS and was cleared to land on runway 8. On an approximate 1 mile final I configured the mixture and prop for "go-around", full rich and maximum RPM. The engine died immediately. Since the engine did not sputter, I thought the altitude compensating fuel pump must have malfunctioned when I adjusted the mixture to full rich. I leaned the mixture to reverse what I thought killed the engine. Leaning did not cause the engine to re-start. Loosing altitude quickly I looked up to see a ravine between us and the runway and I was convinced we could not clear the ravine. I was also sure that if we went down in the ravine, we would likely not survive. The stall horn sounded and I recognized that I needed to get the nose down and turn the aircraft south to avoid the ravine. I was quickly running out of time and I acknowledged that I had to "Fly the Airplane" and get it down as best I could.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have switched to the fullest tank prior to entering the traffic pattern. However, if the altitude compensating fuel pump mal-functioned, switching the fuel selector would have had no effect on the engine. It doesn't seem likely that the last drop of fuel was burned at the exact time the mixture was adjusted to full rich.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe the altitude compensating fuel pump mal-functioned because the engine stopped immediately when I adjusted the mixture to full rich.
