

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Las Cruces State: NM

ZIP: 88007 Country: USA

Latitude: 32.2894167 Longitude: -106.9219722

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 9-1-2014 Local Time: 0830
mm/dd/yyyy

Time Zone: mdt

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N613LE

Manufacturer: Boring Robert Burton

Model: RV6A

Serial Number: 23993

Year of Manufacture: 2002

Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: vans rv6a

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 1650 lbs

Weight at Time of Accident/Incident: 1335 lbs

Number of Seats: 2 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 0

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft impacted in a nose low attitude. Damage to: Prop, main gear, nose gear, firewall, engine mount, both leading edges, fuel tanks were leaking and compromised, floor, belly, cowlings, engine accessories,

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The following is my recollection of the events of the morning of September 1, 2014 leading up to the accident involving N613LE a 2002 vans design RV6a. It is followed by some personal commentary and thoughts.

On the morning of September 1, 2014 I met with Katie Drexler to fly N613LE. We had flown the aircraft the two previous mornings together. The evening before I had added 10 gallons of 100ll to the right fuel tank. I verified fuel for both tanks. The left tank had 8 gallons and the right tank had 14 for a total of 22 gallons for the flight which was expected to last approximately one hour. We preflighted the aircraft and prepared for the flight. We started, taxied out, performed a normal run up, and then departed runway 26. We performed a series of touch and go landings using runway 26 and then began using multiple runways. The weather was clear and calm with no wind reported. There was no other traffic in the area on ctaf. We continued and made several landings using each runway at least once. The last takeoff prior to the incident was from runway 22. We departed runway 22 and made a climbing right turn and declared our intent to make left downwind traffic for runway 8. As we climbed through 5000 msl and 90 mph we began our left base turn as not too extend our pattern too far from the field. A power reduction was made and flaps were added. Our airspeed at this point was 80mph and we began our base to final turn. The base to final turn started to get steep as not to overrun the runway and the nose attitude was slightly high. As we were about halfway through the turn I felt we were slow and needed to get the nose down. At about that exact moment I felt the pre stall/spin burble that many RV type aircraft exhibit and immediately knew we were too steep and too slow. I grabbed the control and pushed forward as the stall/spin began. My main objective was to arrest the spin to level flight and hope to recover the stall before running out of altitude. With inputs of elevator, rudder and aileron I was able to arrest the spin and recover to wings level nose low attitude. Unfortunately I was not able to maintain enough energy to recover and climb as we ran out of altitude. We impacted the ground I believe in a fairly level attitude and came to rest short of the threshold for runway 8. I believe we impacted at about a 010 heading.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Commentary and notes

The last airspeed I recall was 60-62 mph. I believe the high nose attitude, the high angle of bank, low power setting, and climbing density altitude were all factors that increased our stall speed above our minimum or at least took them to equal each other creating the situation.

I often read accident reports and shake my head thinking "How did they end up like that?" Fortunately I/we were able to walk away and look back and make adjustments to things we do in order to try to prevent a mishap like this again. If any one of the number of factors that led to this accident were adjusted it probably would not have happened but then the approach to it would not have changed either and the possibility would have remained for a later flight.

Those factors include:

too slow	too much bank angle
below personal minimums (of either pilot)	flaps
power settings	density altitude
confidence or lack thereof in piloting skill	

Cockpit communications and briefings.

I recently attended a week long training seminar. The biggest thing I took away from the week was the attention to detail in pre and post flight briefings. I have already begun to incorporate these actions into group flying and formation flying activities that I participate in. After this experience I believe that approach needs to be in place for all flights. Including single ship with multiple pilots or even unrated passengers so that there are no questions as to who and what each persons responsibilities are.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I don't believe there to have been any mechanical failures.
