Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Helicopter rotor systems bent (main), sheared off (tail rotor). Windshield / door plexi fractured open, Instrument column separated from flight deck. Front Left skid separated from skid assembly, Airframe skin damage, Main rotor mast cowling separated from fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The mishap helicopter was used for a training flight in the morning and when asked how much to fuel, I indicated to fill just the Aux tank, but the Main tank was fueled instead. The recreational flight departed Double Eagle II airport (KAEG) at about 07:20 local, and was noted to be heavy and I decided to fly a short tour of Rio Rancho to lighten the load before doing any approaches. We flew for about 20 minutes and then attempted an approach to a pinnacle. One approach was accomplished without problem, and so I opted for a second approach.

As we approached the landing site from above and North, I started at about 65 knots. The aircraft was slowing gradually and at about 20-25 knots and 15ft AGL, the low RPM horn sounded. I initiated a go-around by lowering the collective and pulling gentle aft cyclic to increase rotor RPM and then tried to turn the aircraft to the (Right) West to engage my egress plan.

When I noticed that the helicopter was still loosing altitude faster than expected (not allowing for adequate clearance of trees and terrain), I executed an autorotation and struck the left skid against a hill, with a following rollover event until the helicopter came to rest on it's right side at the bottom of the ~15ft hillside.

I extricated myself, and then assisted my passenger in exiting the aircraft. As she moved away to safety, I secured the electric power and magnetos. I then began calling the flight school, it's owner and staff, and the FAA Operations desk to report the accident.
