Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Two inch long by one inch wide dent with crease at leading edge of rotor blade. Approximately 1/3 to 1/2 down spanwise axis of blade.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Student and I departed KBTR with a 160 degree heading to L38. Intent of flight was to practice autorotations, 180 degree autorotations and emergency procedures. After being handed off to departure, we proceeded on a 150 degree heading to follow Airline Highway. Departure had cleared traffic on a 15 mile final for runway 31. Student and I climbed to 1500 feet MSL (aircraft on final restricted to 2000 feet MSL) and were watching for on coming traffic. Around 10 miles south of KBTR, three birds came from above and the right. I started to lower collective and the student began a turn. I took controls just as the bird impacted the retreating portion of the rotor disk. Bird impacted mid-way between blade tip and root. I notified departure and was cleared to airport without further incident. We did not feel any excess vibration or any indication of damage.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Higher altitudes may have prevented bird strike.
