NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

KARV, Runway 18, Reported Wind 170/11Kts Gusting 21kts

Normal approach to landing, setting up for a 3 point landing instead of a wheel landing because the aircraft was equipped with Trick Air wheel-penetration skis. On the runway centerline less than 6 feet off the ground when I noticed that snow began blowing directly across the runway just ahead of the aircraft and I remarked to my passenger about it. As we approached the blowing snow, the aircraft drifted to the right. I corrected with rudder and aileron but the aircraft still drifted right. I decided to initiate a go around. As I applied power and attempted to fly out of the gusting crosswind the aircraft continued to drift right and the right wing dropped as if it had stalled. The right main gear and ski impacted the snow with a sideward load and the right main gear collapsed. The right wing tip then contacted the snow and the aircraft cartwheeled right wing tip, nose, left wing tip and then settled perpendicularly balanced on its nose. I evacuated the aircraft through the broken windscreen and then the aircraft tipped over onto its back. I then helped the passenger evacuate the aircraft.

No injuries other than minor scrapes and bumps and bruises to either occupant.

The aircraft was recovered with the assistance of airport authorities and a local towing contractor.

No oil or fuel was spilled.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Earlier initiation of go-around.
