

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Jones Farm Field - OK12 State: OK

ZIP: 73572 Country: USA

Latitude: 34.3991667 Longitude: -98.2663889

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 03/17/2015 Local Time: 20:20

mm/dd/yyyy

Time Zone: CST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N299BH

Manufacturer: Jones Ronald C

Model: Bearhawk

Serial Number: 064-121-122-930

Year of Manufacture: 2010

Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: Avipro

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2700 lbs

Weight at Time of Accident/Incident: 2460 lbs

Number of Seats: 2 Flight Crew Seats: 1

Cabin Crew Seats: 0 Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft; Left wing and landing gear, engine sudden stoppage, engine cowling and prop, right horizontal stabilizer (fabric only), windshield cracked

Property: barbed wire fence, two tube steel gates and two end posts

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

A thorough preflight was performed and a normal takeoff was undertaken from KGTU at about 1845 CST, and this was followed by an uneventful cross country VFR flight to OK12. All systems were operational. The inboard tanks had been topped off earlier in the day upon arrival. VFR flight following was discontinued upon sighting OK12, and a left downwind entry was made for runway 17. The landing checklist was completed. Left base and final were normal, and the illuminated wind sock indicated a slight left crosswind and the wind sock was only up about a quarter from completely limp. Half flaps were selected and the angle-of-attack indicator showed AOA right on the doughnut, which is the desired approach speed before starting the flare. Touchdown on the grass aligned between the lights was of minimal firmness. Because there is a slight upslope to the runway at the approach end, a slight brief bounce is common with tailwheel aircraft at this airstrip, as it is difficult to get the nose up high enough to enable the tailwheel to touch down first, especially at night, where height estimation is more difficult and I am hesitant to make a very high angle-of-attack power-on approach for fear of misjudging it. The second touchdown was very gentle and the aircraft rolled forward. In the three-point attitude direct forward visibility over the nose is nil. After starting to apply brakes, I could see the aircraft was starting to veer to the right, and I applied left rudder/brake and left aileron correction, but the aircraft continued to the right, departing the runway, whereupon it encountered rougher terrain. We then bounced in the air quite firmly and then landed more softly while I attempted to control the bounce with elevator. My wife, who was sitting on the left, says she heard a crunching sound. I personally didn't hear his, possibly because I was on the other side (this aircraft is set up for right PIC operation, as it allows my right hand to control the stick and my left to control the throttle). I continued to apply left rudder/aileron, however, the aircraft continued to the right and struck a barbed wire fence and 2 inch steel end posts set in concrete about 115 feet to the side of the runway, where it came to rest, pointed south. The entire episode happened very fast, perhaps 4-6 seconds in our estimation. Approach speed at this weight would be about 65 knots or 75 mph. Assuming a 5 mph wind, that works out to 103 fps. Assuming I hit the fence at 30 mph, that works out to about 44 fps. Taking the average velocity gives 74 fps, which means I would cover about 450 ft, the measured distance from the touchdown area in 6 seconds. I believe it was about 2020 CST when we came to rest.

My wife and I exited the aircraft on our respective sides, and I turned off the power and fuel. I verified my wife was uninjured, and heard the ELT beeping. I then reset the ELT. We were contacted shortly after by the Air Force, and I indicated that I had reset the ELT. Although we could smell gasoline, there was no evidence of any dripping. No fire occurred. We then walked to the house and contacted the NTSB and insurance company.

The next morning, I inspected the airplane. It appeared the left landing gear had departed the aircraft before it came to rest, with the gear lying on the right side of the fence with the aircraft lying on the left side of the fence. When the gear departed, it caused the left wing to contact the ground, damaging it. In addition to the landing gear showing evidence of separation of the tabs attaching it to the frame, there was a through and through crack near the cluster weld near the wheel. Additionally, the flexible brake hose going to the brake caliber was torn in two. I cannot be certain when this damage to the brake hose happened or if it caused the aircraft to not respond to left rudder and braking corrective inputs, but that is one possibility why I couldn't seem to get a correction.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Avoid night time landings when possible, replace flexible brake hose every 1000 cycles, maintain better directional control.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☒ Yes ☒ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

Possible left brake hose failure upon landing; the hose is a non-serialized custom automotive braided steel brake hose, manufacturer and part number unknown.
