

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsbgov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft crash landed in a field. Significant damage to left wing. Additional damage to both propellers, all landing gear, flaps, ailerons, and underside of fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The majority of the following statement was taken from the mishap pilot's personal statement that he gave after the accident. The original text is available upon request. "Below are the events leading up to the crash of LYM169 (N66906) on January 21, 2015. All times used are in Mountain Standard Time. On Tuesday, January 20th, the pilot woke up at 0330 am and arrived at work at 0430 for his flight to Trinidad (LYM1961). That flight went without incident and the pilot was off duty at 0830. From 1000 to 1200, he was able to take a nap in the hotel where he was staying during the day. At 1745, he reported to work at Trinidad airport (KTAD). During the preflight/run-up of aircraft N313RA, he discovered the battery was almost dead and the engines would not start. The airport did not have a GPU available to start the aircraft. Instead, the ground crew had two 12-volt car batteries that were linked together. The pilot unsuccessfully attempted to use these to help give the plane power. He then called Key Lime Air dispatch, told them of the problem, and called the FBO for assistance. The pilot started the plane at 2100, and preceded back to KDEN. He blocked back in at 2222. When all post flight actions and maintenance write-ups were completed, he called dispatch to go off duty at 2300. Dispatch informed him that due to scheduling issues with his Wednesday morning flight, he would have to stay on duty all night and then reposition a plane from KAPA to KDEN at 0330. Once arriving home at 2345 on Tuesday night after the flight back to KDEN, the pilot ate dinner. He decided that if he had to wake up at 0200 to drive to KAPA, two hours of sleep would make it difficult to wake up and he would have a good chance of oversleeping. He remained awake until it was time to drive to KAPA. On the drive there he realized that he was fatigued and had issues keeping his eyes open. Once arriving at the Key Lime ramp, he called the KDEN ramp supervisor and said he was there but very tired. However, he did not use the word "Fatigued." The ramp supervisor asked if he was okay. The pilot replied that he was. The ramp supervisor told him to fly up to KDEN, drink some coffee, and once done with the flight to KCBK, he could nap before flying back to KDEN. Once arriving at KDEN and completing post-flight actions, the pilot realized that the nose wheel was losing air quickly. He assumed that it must have happened while taxiing to the UPS ramp. At this time, he wondered why he kept having issues when he got into a plane. He then conducted the preflight N66906 for the flight to KCBK and noticed nothing unusual. While waiting for freight to be brought out, he walked towards another pilot's plane to talk to him, bumped a fire extinguisher, knocked the pin loose, and discharged the unit. He stated that he now felt jinxed and was going to cause an issue with the plane he was to fly to KCBK. After the freight was brought out and loaded into N66906, he started up but realized both taxi and landing lights were inoperative. He turned back to the ramp and called maintenance. After roughly 45 minutes of troubleshooting maintenance could not find the cause of the issue and the lights were MEL'd. He then waited for daylight and taxied out for the flight. During taxi and takeoff there were no issues with the plane. Once he reached cruise altitude and configured the plane, he did not notice any issues and completed the aircraft trend, which read normal. After roughly 40 minutes into the flight, he stated that he was definitely starting to feel fatigued. Once 25-30 miles from the GLD VOR, he asked Denver Center to go direct to KCBK to shorten the flight. Approximately five minutes later, he noticed the Left Boost Pump Inop light came on. He thought that turning on the Left Auxiliary Pump could fix the problem. However, soon after that the left engine failed. The pilot thought that it was a mechanical issue and radioed ATC to report an engine failure. He then turned toward KGLD. ATC reported the weather and asked what approach he wanted. The pilot stated that what he really should have been doing was troubleshooting the cause of the left engine failure. He believed the high level of fatigue, issues with the previous aircraft, and the fact that the company had just lost a pilot due to a crash a month ago caused him to not think straight and do the proper emergency procedures for engine failure in flight. He failed to complete any of the required emergency procedures and concentrated solely on getting to KGLD. The Right Boost Pump Inop light then came on. The pilot turned on the Right Aux Pump but the engine started to fail. Now the pilot stated that he really started to feel stressed and that "his head was out of it." He thought he was not going to make it, and the fear of death clouded all decision making. He once again did not conduct the required emergency procedures and just thought of just getting to the airport. He was losing altitude quickly and told ATC he was not going to make it. ATC told him to find a road to put the plane down. At this time, the aircraft was roughly 2000 feet AGL. The pilot located a gravel road (County Road 71). At roughly 1000 feet AGL, he put the landing gear in the down position, but did not get a chance to verify it was down. He was planning on landing to the left side of the road to avoid the power lines running along the south side of the road. At roughly 300 feet AGL, he saw a power line to the left (north) side of the road. At the last minute, he tried to pull up to miss the power line to the right but realized was going to hit it. The aircraft hit the power line. The pilot stated that he must have blacked out for the next few seconds. The next thing he knew was that he was stopped in a field to the north of County Road 71. Fearing an engine fire, he put the tanks in the off position, pulled mixtures, turned off the boost pumps and all electrical switches and master power, and egressed from the plane. (Continued Below)

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The pilot listed five possible causal factors related to this accident. All can be attributed to human factors and training. Enhanced fatigue risk management program training for our Part 135 cargo flight crew could have increased the pilot's awareness of the dangers of flying fatigued and the importance of continuous self-assessment in order to recognize the point where he needed to take himself off the flight schedule.

Concentrated training on the Piper PA-31-350's fuel system and increased practice with associated emergency procedures could have better prepared the pilot to handle a fuel related emergency situation, especially when compounded with multiple human factor issues.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

According to the pilot's statement, he concluded that there were many factors that caused the accident.

First, he was too fatigued to even be flying an aircraft and should have made the call that he was unsafe to fly. Second, he did a poor preflight of N66906 and didn't realize that the aircraft had less fuel in the outboard engines than planned for. Third, he knew that if the Boost Pump Inop light turns on that there was likely a fuel flow issue. He stated he did not have a clear head that day due to fatigue and did not think to change fuel tanks. Fourth, he did a poor job at taking care of the aircraft once the engines went out and did not follow the emergency procedures. Fifth, he should not have let the thought the recent Key Lime Air fatality affect his decision making.
