Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both main gear legs pushed up through the wings. The prop was severely damaged and the engine and prop broke off of the main fuselage and ended up in front of the left wing. The wing skins were wrinkled and the flaps were destroyed. The rudder was damaged and the elevators were also damaged. The aircraft did not roll or flip over. The front floor boards were pushed up and the dash was dislocated. The pilot yoke was broken upon impact with the pilot's head.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We were returning from a pleasure trip to California and Las Vegas. We stopped at E98, Mid Valley, AZ for fuel and bathroom. Prior to departure, I obtained weather for KE11 from Fore-Flight Commercial Service (DUATS). We left E98 for Andrews (KE11) on an IFR flight plan, expected about 1.5 hours of flight.

Around Roswell, there a shallow layer starting to appear underneath us, but conditions at Andrews were still good and forecast to be so until about 2:00 am.

Once I was vectored to the IAF for GPS 16 to Andrews, ATC (FTW Center) informed me there was an aircraft ahead of me for Andrews and ATC would let me know their approach outcome. About 10 minutes after that, ATC informed me that the aircraft had gotten in OK and had canceled IFR. I did not know the aircraft type.

We started our southbound (final) leg of the approach and begin to descend. Fairly close-in to the airport, with The landing gear down and flaps configured for landing, we descended through a cloud layer that was maybe 200-300 feet thick. We broke out at the bottom of the layer at maybe another 700-800' AGL. I could clearly see the runway and its lights.

We were descending faster than I wanted, so I added some power. It did not change anything, so I added full power, the engine sounded normal, but we were still descending and I could not change the descent rate. It was less than a minute from the time we broke out of the clouds until the time we were on the ground. We impacted terrain, skidded a little bit, then spun around about 180 degrees.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Had I known about the icing ahead of time, I would have chosen to go elsewhere, or stay where I was, but there was no indication of icing from DUATS, the local (KE11) AWOS or ATC and the fact that another airplane had just landed at KE11 with no problem, gave me confidence that the WX was OK for my planned approach.
