NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I went to Levelland, Texas to HSI Turbine to pick up an airplane that they had rebuilt. They asked me to test fly the aircraft. We pulled the aircraft out of the hanger and did a ground run on to check the engine. Found problem with throttle linkage, readjusted and ground run was fine. Preflighted the aircraft for the test flight. Preflight checked out ok. Got into the aircraft and adjusted seat belts to fit and put my helmet on. Re-started engine and used my CIGAR checklist that I have used for over 15,000 hours. Controls (C) are checked controls free and correct. Instruments (I) check and set all instruments. Gas (G) is checked for the fuel selector is the correct position. Attitude (A) is setting the trim for takeoff. Run-up (R) is checked to make sure the engine and all of the gauges are correct and the propeller is working properly. With everything checked and the wind conditions 310 degrees at 9 KTS I taxied down to the end of runway 35 at KLLN. Pulled out onto the runway for the test flight. Pushed the throttle up and made a normal takeoff. I made a right hand turn to stay over the airport and not fly over town. When a leveled out on the crosswind leg of the pattern the controls got stiff. At this point I decided to make a landing to get the controls checked out. I turned on my downwind leg and the controls were still stiff. Turned right on base and then onto final. When I got on final and was about 100 feet AGL the aircraft was trying to turn to the left and I tried to level the wings and at this point the controls became loose and I visually saw the left aileron flopping up and down. The right aileron was still working correctly. I tried to land the aircraft on runway 35 at KLLN and it bounced and the aircraft started to rolled to the left. On the second bounce I added power on the throttle to get the aircraft under control. After the second bounce the aircraft became airborne and rolled severely to the left at this point the left wing impacted the ground. When i saw the wing hit the ground I pulled my legs up into the fetal position and closed my eyes. We I opened my eyes I was laying on my left side trying to figure out where I was. At this time Richard Harvey from HSI Turbines opened the door and helped me out of the aircraft.
