Main rotor strike and rollover

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I left IKK approximately 1500 CDT April 15, 2015 after topping off with fuel to continue goose count for the state. After counting several plots, we arrived at the location of the accident. We slowed to about 60 kts and descended to about 300 ft. AGL to search for any water that might contain geese. At the conclusion of the inspection of that area we started to climb and head to next location. At this point the engine RPM rapidly rose followed shortly by a low main rotor indication. I elected to make a straight ahead downwind landing into the open field in front of us. Due to the strong tail wind we carried some forward momentum into the landing causing a tilt forward and main rotor strike. At this point the helicopter rolled over onto its left side. After the movement stopped, I shut off the engine that was still running, shut of the master, and the main fuel valve. We then exited the helicopter out of the right hand (top) door. The helicopter was substantially damaged due to the main rotor striking the ground.
