Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft impacted medium-sized trees at edge of field. Extensive damage to leading edges, tips. Left wing root was separated by tree and left strut extensively-deformed. Fuselage bent and distorted, wings both pushed back approximately 5 - 10 degrees, fully-deployed flaps were forced inward to shatter rear glass. Windshield shattered. Lower wing skins / roots deformed enough to prevent both doors from opening. Multiple dents and punctures to engine nosebowl and cowl, 1 prop tip curled backward.

No damage to property other than some broken branches. No dwellings near impact site and power lines were cleared on approach.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After a preflight and AWOS listening session, I started up and taxi'd out Cessna 150F N8558G in VMC conditions at Wausau Downtown Airport (AUW) for a short flight to Neilsville Municipal Airport (VIQ). Engine idle was normal as was run-up. Waiting for traffic to clear, I back-taxi'd runway 23 and departed - climbing to 2800' MSL on a heading of 240 degrees. There was a considerable headwind - as my groundspeed was reading averagely 66 MPH. Approximately 20 minutes later, near Marshfield, WI (MFI) the engine dropped from cruise RPM (2400) to idle in approximately 1 second. I applied carb heat and the engine returned promptly to cruise RPM. Approximately 2 minutes later I discontinued carb heat. Approximately 4 minutes after that, the engine again dropped to idle. I applied carb heat - the motor returned to 2400 RPM for about 1 second then went right back to idle. I then cycled carb heat (leaving it engaged), throttle (leaving it at full), verified mags (on), fuel-on, mixture-rich - no change in RPM. I also attempted to prime fuel w/ no effect. I then began setting up for my off-field landing. With options limited by time and obstructions, my only reasonable choice was a down-sloping, downwind rough pasture that was void of dwellings but contained patches of trees and brush. Skipping over the power lines that bordered the field, I deployed full flaps but sailed in ground effect, downhill for the majority of open space. Main gear 1st contacted ground approximately 30' from the trees that ended my rollout while the aircraft was still at approximately 50 MPH. With the lap harness holding firmly, my face slammed into the instrument panel - shattering my glasses / sunglass slips and breaking off the ignition key in my forehead, and slamming the master switch to the off position. I was still able to shut off mags w/ the operational half of the key still in the ignition barrel. There was no sign of smoke or fire, and I did not notice fuel leakage at this time. (However, when I returned to the aircraft to collect personal items, I noticed a distinct fuel odor - no surprise, as wings were substantially deformed) There was no damage to any other persons or property other than a few tree limbs broken. Trees pinned both cabin doors tightly shut. After kicking out the windshield remnants, I egressed by climbing over the instrument and cowl. Bleeding rather profusely, I walked a 1.5 miles until I was picked up by a local on an ATV. (Due to the rural and hilly location, phone reception was spotty at best) He transported me to VIQ where another local took me to the hospital and contacted local law enforcement - whom interviewed me in the ER during my various procedures. Upon my release from the Neilsville ER later that afternoon, I contacted the Milwaukee, WI FSDO - Mike Batson. He informed me at that time that my responsibilities as to verbally reporting the incident were now complete.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I were to do it all over again, I would've attained a higher cruise altitude to afford myself more options for an emergency. And, since the failure occurred so closely to my destination, it may have additionally afforded me adequate altitude to glide to the airport runway - or at least closer to town for a more timely emergency / medical response.
