Property damage: None

Airplane damage: Main landing gear, fuselage frame structure, left and right wings, right horizontal tail surface, rudder, windshield, fabric in multiple places, propeller and spinner.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On July 5, 2015, after practicing stop-and-go short field landings, I departed Claremont County Airport (I69) at approximately 1730 EDT for Cincinnati Lunken Airport (KLUK), approximately 10nm to the west. I received no service while at I69. After departing, I turned left and climbed to approximately 1800 MSL (950 AGL) on an approximate heading of 200 degrees, reduced power to 40-45% for slow flight and activated the Lean-of-Peak assist feature of the JPI EDM930 Engine Instrument. As I leaned the mixture and watched for the first cylinder to reach peak EGT indication, a Fuel Flow Sensor malfunction indication appeared on the EDM930. I subsequently enriched the mixture, but the sensor malfunction indication continued and the engine lost power. I started a turn back to I69, but since it was 4nm away and I was unsure if the engine would continue to run, I looked to find an alternate place to land. I spotted a large field to my right, established best glide speed, and headed towards it. I checked the magneto switch, fuel on/off lever, mixture, prop, throttle, and applied carburetor heat. The engine did not respond and so I focused on landing. As I approached the large field, I noticed power lines obstructing the target landing area and so I proceeded northwest towards a golf course. I selected a fairway and as I set up the plane to land, I pumped the throttle and the engine briefly surged, causing me to miss my intended landing spot. The engine ran for a few seconds and then stopped. At this point I was only a few hundred feet above the ground and quickly executed a short field approach onto another fairway. As I was turning to line up with the fairway, two golf carts emerged from under trees on the right side and moved onto the fairway. So, I extended my glide to miss the golfers and landed further down the fairway. After touching down, I pulled up and banked left to clear a ditch in front of the green and trees beyond the green. I touched down past the green in very tall grass and the left main landing gear collapsed and the plane rolled forward through a plastic out-of-bounds fence while rotating counter-clockwise. The right wing tip and right elevator hit a tree and the plane came to a rest in the backyard of a residence adjacent to the golf course with the nose and the left wing tip on the ground, approximately 120 degrees from the direction of travel. A plastic fence post punctured the left wing and the wing spar broke outboard of the wing fuel tank. The ELT did not activate. I unbuckled my 5-point harness, removed my flight helmet, exited the plane uninjured, and used my cellphone to report the accident. The accident occurred at approximately 1740 EDT 3.5nm on a 235 degree radial from I69.
