The following is the statement provided by Alfred Bell reference the aircraft mishap that occurred on September 24th 2015.

On thursday September 24th 2015 I was piloting a Bell 206BIII N2648CA owned and registered to Chem-Air LLC. We were conducting aerial application of forestry herbicides. The incident occurred at approximately 10:40 am. I had been operating the aircraft since around 6:30 am on a previous location from a different LZ. The tract I was now treating was 3/4 complete. I landed on top of the support truck to take on an 80 gallon load of herbicide and also took on approximately 20 gallons of Jet A fuel. After departing the support truck with all systems performing normally. I flew to the boundary of the treatment area and performed a climbing right turn in order to line up on the next spray swath heading in the opposite direction. As I neared the top of my climbing turn I noticed engine and rotor rpm beginning to decay. I was over a stand of mature pine timber just north of treatment area. I applied just enough collective pitch in order to clear the mature timber and re enter the cleared treatment area. Upon doing this the rotor rpm continued to decay to a dangerous level. As soon as the tall timber was cleared I pitched the nose of the aircraft down and lowered the collective control in an attempt to regain rotor rpm. It was evident I did not have the altitude nor airspeed to accomplish this. As the ground came rushing up I had time to apply all remaining aft cyclic and collective pitch. The aircraft impacted the ground in a level attitude then rolled over onto the right side and slid for 20 or so meters. When the aircraft came to rest I immediately turned off electrical switches and egressed the cockpit via the pilots windscreen which was completely busted out. I immediately could tell that I had an extreme lower back injury but managed to walk 20-30 feet away and lay on the ground until my ground crew found me and began evacuation process.
