Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left main gear collapsed. Left Wing Tip bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 26 Aug 2016 I was tasked to do a flight with N15MD after maintenance had been performed and was accompanied by an aircraft mechanic to monitor aircraft performance. After a normal preflight, start and taxi I accomplished the before take-off checks including a full flight control check. The flight controls were confirmed with the passenger and performed normal. I started the takeoff roll and the aircraft accelerated normal to rotation speed. As I rotated the airplane the elevator control moved aft initially but then I was unable to move the elevator control further aft for rotation and takeoff. I decided to abort the take-off and brought the throttle to the closed position. I applied brakes and slowed down. Approaching the departure end of the runway I realized that I would be unable to stop the aircraft before it departed the prepared surface. I shut down the engines and feathered the props before the prepared surface departure. The airplane continued to slow down and came to a rest in a right turn on the access road adjacent the runway. Both people on board disembarked the airplane uninjured.
