Sorry for not getting back right away had to go do some flying right after our conversation and just got back. Yes Me and Ben had talked about the mufflers needing replaced because back in September of last year a tail pipe cracked around one of the mufflers which Ben had welded. Ben also mentioned late last year that he had purchased a new exhaust system for the plane and planned on installing it. I went down to his hanger a little bit ago and it is still there with his other airplane. He was building a kitfox that is about 80 percent done just needed to do the fabric and install the engine. Ben and I worked close together on his airplane he liked to do a lot of the work and have me over see him .Ben and I did an oil change in march and had the airplane uncowed then and looked everything over then. The lose of Ben was a very grieving time for us he will be missed. He was a very heart warming gentlemen who I enjoyed working with. If there is anything else I can help you with please don't hesitate to call.

Sincerely Jeff Jensen
