4760 Oakland Street, Suite 500
Denver, CO 80239

ACCIDENT # 0171 INDIVIDUAL#: 001 NAME: HARRIS, RANDALL L. MODE: AVIATION
DATE OF ACCIDENT 07/21/2016 DATE RECEIVED 08/17/2016 PUTREFACTION: No
N # 511GS NTSB # CEN16FA278 CAMI REF # 201600171001
LOCATION OF ACCIDENT Fairmont, OK
SPECIMENS Blood (Cavity), Blood (Femoral), Brain, Heart, Kidney, Liver, Lung, Muscle, Spleen, Urine

FINAL FORENSIC TOXICOLOGY FATAL ACCIDENT REPORT

CARBON MONOXIDE: The carboxyhemoglobin (COHb) saturation is determined by spectrophotometry with a 10% cut off and confirmed by chromatography.

>> NO CARBON MONOXIDE detected in Blood (Cavity)

CYANIDE: The presence of cyanide is screened by Conway Diffusion, when the COHb level is equal to or greater than 10% or upon special request. Cyanides are quantitated by spectrophotometry and confirmed by chromatography. The reporting cutoff for cyanide is 0.25 ug/mL. Normal blood cyanide concentrations are less than 0.15 ug/mL, while lethal concentrations are greater than 3 ug/mL.

>> NOT PERFORMED

VOLATILES: The volatile concentrations are determined by headspace gas chromatography at a cut off of 10 mg/dL. Where possible, positive ethanol values are confirmed by Radiative Energy Attenuation.

>> NO ETHANOL detected in Urine

DRUGS: Specimens are analyzed using immunoassay, chromatography, GC/MS, HPLC/MS, or GC/FTIR. Concentrations (ug/mL) at or above those in () can be determined for, but not limited to, the following drugs: amphetamines (0.010), opiates (0.010), marihuana (0.001), cocaine (0.020), phencyclidine (0.002), benzodiazepines (0.030), barbiturates (0.060), antidepressants (0.100), and antihistamines (0.020). Drugs and/or their metabolites, that are not impairing or abused, may be reported from the initial tests. See the CAMI Drug Information Web Site for additional information (<http://jag.cami.jccbi.gov/toxicology/>).

>> Azacyclonol detected in Urine
>> Azacyclonol NOT detected in Blood (Cavity)
>> Fexofenadine detected in Urine
>> Fexofenadine NOT detected in Blood (Cavity)
